Emotions and Trends

The World Growth Model is back on a buy signal with the trend turn from down to up last week.

The interesting thing about trends is you never know how far down or up they will move. This means, for illustration purposes only, if the market de-

clines 5%, you don't know whether it is a precursor to an additional 50% decline or whether it will reverse and move back up. Likewise once it is moving up 2%, you don't know whether that foreshadows the next 20% up leg or not. No one knows the future, so we take one

of two approaches. Either we buy and hold and hope or make buy and sell decisions based on a strategy that makes sense and is attributable to skill, not luck. This strategy tries to avoid the big declines and capture the big

(Continued on bottom right on page 12 see REVIEW on top)

This is the daily chart of the Dow Industrials (upper) and Dow Transports (lower)

WEEKLY REVIEW

2/18 Increased the stop price on JNK.

2/10 No changes.

2/3 PCY stopped out. JNK may be next. Bond market getting a bit bifurcated or trifurcated.

1/27 PCY getting close to its stop level. Buy JNK as noted above.

1/20 No changes.

1/13 No changes.

	2010	2011	2012	2013	ytd 2014	Incptn
ETF Income Portfolio	4.8%	3.6	4.8	1.1	0.1	15.2
Aggregate Bond	6.4%	7.7	3.9	-2.2	1.3	18.0

This is the ETF Income Database and Ranking. It shows performance over the last 12, 9, 6, 3, and 1 months through the previous month's end. V is Volatility. NAV is price. CS is Comet Strength (not shown). C is Comet (not shown), which is an ETF's risk-adjusted performance; the higher the better. V, CS, and C are proprietary tools. Rank column shows the number of comets.

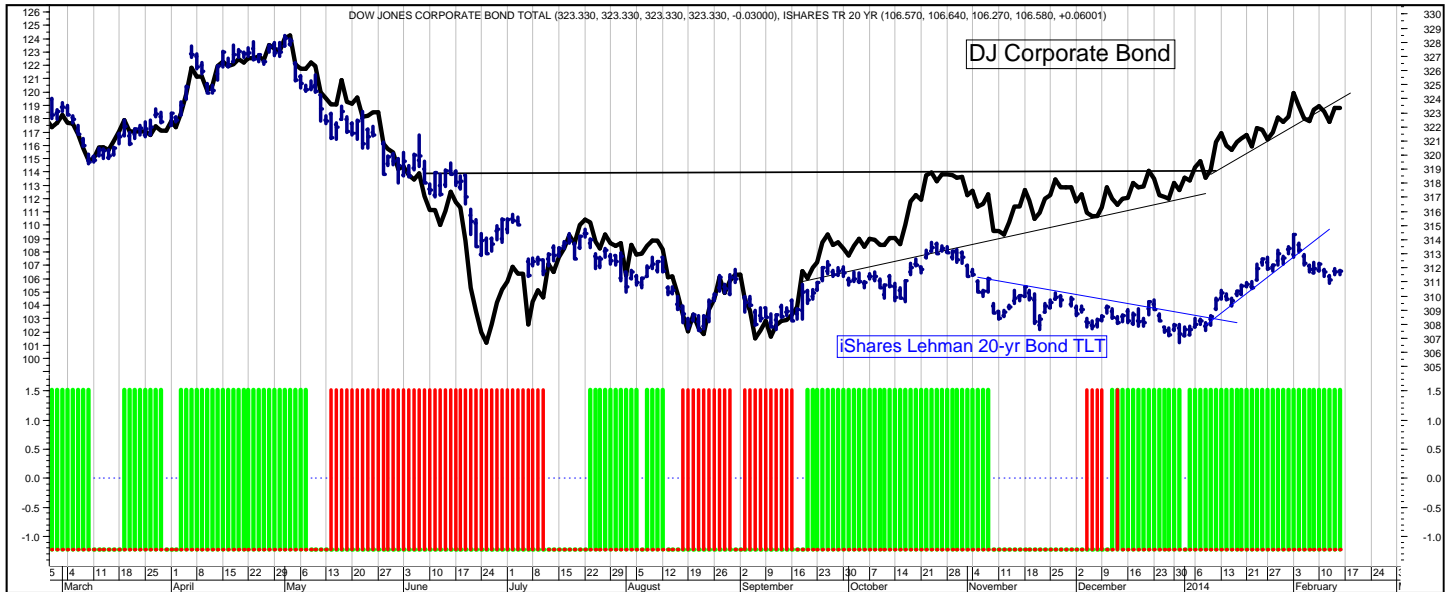

ETF LEGEND for pages 3 (Bond), and 7, 8, 9, and 10 (Equity):

Column headings: The first column shows the ETF name, the second column shows its symbol. The third column shows the ETF Style. The first letter is always either B (Bond) or E (Equity) or H (Hybrid). The next letter(s) is the style. So, BS-bond short, BI-bond intermediate, BL-bond long, BF-flexible, BW-world, BH-high yield. And for Equity, EA-equity aggressive, EC-equity contrary, EG-equity gold (precious metals), ESC-small cap, EMC-mid cap, ELC-large cap, EW-world, EGI-growth/income, ERE-real estate, EV-value.

Columns 4-8 show percentage returns for the periods shown (12 months, 9, 6, 3, and 1 month). Column 9 is V (volatility); a measure of risk; the lower the V, the less risk. Column 10 is the NAV. Column 11 is the C (comet) ranking. C is the risk-adjusted (V) relative performance (CS). The higher the C indicates the most return for the amount of risk taken.

Generally, our ETF strategy is to own the top ranked ETFs (shown in green) and avoid or short the lower ranked ETFs (shown in red).

SLM Bond Timing Model

The SLM Bond Timing Model is based on the expected direction of the Corporate Bond market. The green bars are bullish (expect higher prices and lower yields) and the red bars are bearish (expect lower prices and higher yields). White spaces indicate that the previous signal is still in effect.

WEEKLY REVIEW

2/18 Consolidation phase. With the economy stronger than expected, even accounting for the horrific winter weather, can't see bonds rallying further.

2/10 The bond market has broke its uptrend from what could be a valid breakout zone. This is drawn on the chart above by the last trend lines. Will watch for subsequent action and economic news to decide whether to buy on the pullback or continue to stand aside.

2/3 The corporate and Treasury bond markets are doing better than foreign and junk. Unfortunately, don't own any. I was expecting more weakness, rather than strength.

1/27 No changes.

1/20 No changes.

1/13 Bond prices look like they've broken to the upside (lower rates). If we get a pullback, I expect to reenter.

1/6 Corporates rallied back to resistance. As you can see on the chart above, the "spring" is tightening. Which way will it go? Best estimate is downward for prices and up for yields.

Income Charts (DAILY)

LQD—Investment Grade Corporate

2/18 No changes.
 2/10 No changes.
 2/3 No changes.
 1/27 Watching for a pullback.
 1/20 No changes.
 1/13 No changes.
 1/6 No changes.

AGG—Aggregate Bond Market

2/18 No changes.
 2/10 No changes.
 2/3 No changes.
 1/27 Watching for a pullback.
 1/20 No changes.
 1/13 No changes.
 1/6 No changes.

JNK—hi-yield bonds

2/18 Since JNK is the only bond ETF notching recovery highs here of the 4 shown, I've put a very tight stop on the position. See page 2.
 2/10 No changes.
 2/3 No changes.
 1/27 Will nibble on JNK on its pullback.

PCY—International Bonds

2/18 No changes.
 2/10 The last blue spike is the 'buy' from last week's comment. I am standing aside, however.
 2/3 Watch for PCY to go below December lows and then possible reversal.
 1/27 Watch the stop level.

Each chart shows daily (or weekly if noted in page title at top) prices, a moving average (smoothed green line on price portion), and blue or green spikes. The spikes show potential buy signals. The red lines are price channels. The charts do not show sell signals.

WEEKLY REVIEW

2/18 Moved back into positions last week as noted above. The stop is about 5% away.

2/10 The portfolio is in cash, but see page 7 for the new C-lect 5 recommendation to buy/sell. Currently the C-lect 5 timing is based on the World Growth Model timing. It is on a sell, so we are fully in cash. I may do some further testing to see if direct timing on the C-lect 5 model may provide more timely entry and exit points in order to boost profits.

2/3 C-lect 5 has a new buy/sell as noted above. Stop loss on portfolio has narrowed further to 6%. The timing model itself, however, is much closer to a sell signal. If one is triggered between issues, we will send an emailed hotline. You should have received an email from us last Wednesday. If you didn't, send me an email at SMcKee@InvestmentST.com to update yours. The "window to buy" is open if you are inclined to add to positions or start your investing. I am standing pat for now.

	2010	2011	2012	2013	ytd 2014	Incptn
ETF Growth Portfolio	8.1%	6.9	-2.1	25.7	-0.6	41.2
World Growth Index	17.2%	-4.1	15.1	30.5	-0.1	68.6

The ETF Growth Portfolio changed as of 12/10/12 and again 9/23/13. It is following the new World Growth Model (WGM), which uses the same 5 etfs (EEM, EFA, IWM, QQQ, SPY) as the World Growth Index (WGI). The difference between the two is WGM uses timing and WGI is always fully invested and WGI is rebalanced to 20% in each position daily (this accounts for the different returns when WGM is invested and held). Based on the successful back testing strategy, C-lect 5 was added to the portfolio. Returns are of previous years (to last Friday in year), year to date (ytd) (from last Friday in previous year), and from inception (incptn). It also shows standard deviation (SD). The green highlight (2013, 2014) is to highlight the aforementioned changes.

This page and the next three show the equity ETF database rankings from high to low based on C. C is Comet, which is the risk-adjusted relative performance; the higher the C ranking, the better. Comets, not stars, because comets come into and out of prominence over time. We want the metaphor to match reality.

The first column shows the name. The second column shows the symbol. The third column shows the style; it begins with E for Equity and then the style (A is aggressive, W is world, WR is world regional, SC is small cap, MC is mid cap, LC is large cap, GI is growth/income, V is value). The fourth column shows the C level.

C-lect 5 Backtesting Chart w/out timing (reiteration)

The chart shows the result from evolving through the top 5 ETFs out of a basket of 214 ETFs. No timing was employed.

As you can see, the idea of staying with the risk-adjusted relative performance leaders works over time. \$100,000 of a buy/hold of SPY grew to about \$160,000, while a C-lect 5 portfolio grew from \$100,000 to nearly \$350,000.

Overflow from Page 1, Definitions, and Newsletter Updates

(Continued from page 1) **REVIEW**

gains, while including a selecting process to evolve through the top performing ETFs.

In addition, this comparison between buy and hold and about having to buy and sell more frequently, while admitting we don't know future is to point out one more thing. If that initial 2% or 10% decline continues its down-trend, for those with a traditional "buy and hold" mentality, the question is do they actually end up holding and buying? If your portfolio loses 50% and no one still does not know whether the future will show further declines, will you end up selling then? What if your portfolio declines

30% or 80%?

The point is selling quickly and early, even if you have to buy back in within a week and at nominally higher prices is a far better approach than selling at substantially lower prices and then not having a rational reason for buying back, except perhaps until after the market advance enough that all worries are gone. And don't forget the element of time and circumstance. As the peak bull market passes and the bear unfolds to its eventual bottom and then finally returns to where it was, years will pass. It's a long time to breakeven.

For my strategy, if we sell when we should, and the trend

continues down, at some point, maybe 20% lower, maybe 50% lower, we will eventually get another buy signal, then we move back in with worries and all.

With that in mind, at the same time trends are operating, there are those background fundamental points of information such as market valuations and bond competition to provide more depth to the analysis. Frankly, these things continue to be bearish. Stops and sell strategies should remain foremost in mind.

In the meantime, I show the Window to Buy chart on page 13.

See the portfolios for more information.

Just to clarify a couple of terms that I use regularly.

Short-term is days to weeks.

Intermediate-term is weeks to months.

Long-term is months to years.

Cyclical is 1-5 years.

Secular is 5 years to decades.

Bull market is a series of higher highs and higher lows.

Bear market is a series of lower lows and lower highs.

Neutral market is sideways without a discernible pattern.

Oddly, bull and bear markets may occur simultaneously, but only over different time periods. For example, we may be in a secular bear market, but there are cyclical bull and bear markets within that.

Closing stops are "mental". I look at the position at quarter to the close. If it is trading below the stop (or above if short), then I act with the assumption the security will trigger that closing stop on that day. I sell (or cover) at the close that day.

Portfolio stops for the World Growth Model are internally maintained; they are based on the World Growth Index, not the individual ETFs. Stops will be emailed when close or if triggered.

2/18 Still working on the World Income Model.

2/10 No changes.

2/3 Made an ETF database change. Deleted a low volume ETF and added a larger volume ETF.

1/27 Work continues on that combined timing model (trends and contraries). See comment/letter 12/2.

1/21 No changes.

1/13 No updates.

1/6 No changes.

12/30 Happy New Year.

12/23 Correction to 10/21 comment [changed to WGI]. No other changes.

12/16 No changes.

Window to Buy

The chart above shows the World Growth Model (WGM-blue line) and the Window to buy (Window-red spikes). The chart covers the period from 12/5/2002 through the present. The vertical lines mark off about 1 year increments.

The Window to Buy is to answer the question if I missed the initial timing model buy signal, then when do I either take my initial position or increase my position with additional money?

Being risk-averse, I wanted a way to answer this sensibly, which is try to buy on measured corrections, rather than chase the market higher and higher. In a strong, early bull market, the problem is this approach may miss the early gains, unless you are already following the World Growth Model strategy. But the rest of the time, the Window is a solid approach to managing portfolio risk.

The base line for the Window is 0%. When the WGM is above that level, the window is closed. It doesn't mean the market can't or won't go higher. It just means that the downside risk to the potential stop or sell signal is too large. When the WGM drops enough, then the window to buy opens. This may be mitigated by early stage bull markets.

As you can see, the window to buy is open right now. If the market recovers to new highs, the window will close again. If the market continues lower, either the sell stop will be triggered or the timing model will signal a sell. The timing model sell signal overrides the window to buy.

What normally happens in up markets is the timing model remains on a buy, while the market corrects and opens the window to buy. It then reverses and heads higher with more investment on board.

Descriptions & Disclosures

PORTFOLIO DESCRIPTIONS (pages 2 and 6)

Our guiding goal is to provide the most return with the least risk consistently over time through bull and bear markets.

Income Portfolio, page 2: Uses a proprietary selection methodology on all of the monitored bond-oriented ETFs to pick the top ETFs. I then use a proprietary timing model to decide whether to buy, sell, hold, or avoid. From time to time, timing considerations may take precedence over selections; in other words, we may own lower ranked funds because of anticipated timing changes.

Growth Portfolio, page 6: As of 12/10/12, it is based on the World Growth Index (WGI), which is made up of a static fully invested 20% in each of five ETFs (EEM, EFA, IWM, QQQ, SPY). The Portfolio will buy and sell the WGI based on proprietary timing signals. On 9/23/13, the new C-lect 5 is also part of this portfolio. It too uses timing.

Both portfolios were started on 1/1/10 with \$100,000. As mentioned, the Growth Portfolio strategy was changed on 12/10/12 to the World Growth Model and again on 9/23/13 to incorporate the C-lect 5 model.

Portfolio changes will usually be made at the close on Monday, unless otherwise noted in any emailed hotline update or triggered stop orders. Issues are normally posted on Mondays by 1:35pm cst (Tuesday if Monday is a holiday, defined as market closed).

Portfolios are updated through the Friday close the week before.

Dividends are reinvested in additional shares.

Commissions of \$10 per trade are applied. Interest is currently zero for the money market (cash) position.

SUBSCRIPTIONS: To receive *ETF Selections & Timing*, you may subscribe in one of three ways. You may subscribe on the web site InvestmentST.com using PayPal or call 1-800-800-6563 for Amex, Visa, MasterCard, or Discover orders or send a check to the address on the front page. Subscriptions may be tax deductible.

The recurring monthly subscription is \$24.00. An annual subscription is \$240.00. Subscribers receive this weekly eNewsletter. There is no mailed issue. Subscribers retrieve the current weekly issue at the web site InvestmentST.com by logging in with a user name and password. There may also be emailed Hotline reports sent between issues.

Unless otherwise noted, the weekly eNewsletter is posted by 1:35 PM central time each Monday, except for holidays (closed stock market) and then on Tuesday. It may contain actionable, specific buy or sell advice to take that day at the Monday (or Tuesday) close in each portfolio. We may also use stop orders. For stops, check the ETF at quarter to the close. If it is below (or above) a stop level, assume it will close there and act on that. Portfolio data will be updated through the previous Friday's close. Fund symbols, rather than names, are the official identification used for activity.

GUARANTEE: Subscriptions may be cancelled at any time. Annual subscriptions are refundable for the weekly term remaining with a four-week minimum charge, using a 52-week count. Monthly subscriptions just expire.
