In Gear

I've been talking about the markets being either "in gear" or "out of gear" as stocks continue to rally to recovery highs. This matters because it this pattern marks the transition period from bull to bear or from bear to bull where divergences, either positive in a bear to bull shift or

negative in a bull to bear shift, occur. So, watching for these divergences can provide some warning that things are about to, or are, changing.

Basically, we define a bull market as one where we find a series of higher highs and higher lows. This may be clearly seen

on the chart below. (To be sure, it is not always so easy.) A bear market is the opposite, we find a series of lower lows and lower highs. As mentioned, it is the transition period between the two types of markets from bull

(Continued on bottom right on page 12 see REVIEW)

The chart shows the daily S&P 500 with red smoothed line an 80-day moving average. The lower part shows blue volume and red spikes as possible trading signals.

WEEKLY REVIEW

5/16/11 After rallying, BWX has pulled back to a good entry area. Buy as noted above.

5/9/11 No changes.

5/2/11 No changes.

4/25/11 No changes.

4/18/11 After getting stopped out, the bond market appears to have turned again. Buy as noted above.

4/11/11 Three of the four bond positions were stopped out last week as the Treasury market began to slide again. The counter rally should have held at support, but it didn't.

4/4/11 No changes.

3/28/11 No changes. Sitting tight through the current pullback. It should turn and rally.

ETF data on pages 3, 7, 8, and 9 are for the periods shown (12months, 9, 6, 3, and 1) through the previous month's close. Generally, we want to own the top ranked ETFs (shown in green) and avoid or short the lower ranked ETFs (shown in red).

This is the ETF Income Database and Ranking. It shows performance over the last 12, 9, 6, 3, and 1 months through the previous month's end. V is Volatility. NAV is price. CS is Comet Strength (not shown). C is Comet (not shown), which is an ETF's risk-adjusted performance; the higher the better. V, CS, and C are proprietary tools. Rank column shows the number of comets.

SLM Bond Timing Model

The SLM Bond Timing Model is based on the expected direction of the Corporate Bond market. The green bars are bullish (expect higher prices and lower yields) and the red bars are bearish (expect lower prices and higher yields). White spaces indicate that the previous signal is still in effect.

WEEKLY REVIEW

5/16/11 The bond rally continues. Corporate and high-yield funds have returned to recovery highs, but the government market continues to lag.

5/9/11 Quite the corporate bond market rally. The Treasuries are doing okay.

5/2/11 Continuing the track higher in prices, lower in yields.

4/25/11 Bonds remain bullish for now.

4/18/11 After falling below its support, the bond market has turned and rallied.

Income Charts

TIP—Inflation Protected

- 5/16/11 Higher high.
- 5/9/11 Still bullish.
- 5/2/11 Higher highs.
- 4/25/11 Bull market continues.
- 4/18/11 Continue to hold for projected target.
- 4/11/11 Mild pullback.
- 4/4/11 Continue to hold.
- 3/28/11 In the expected pullback.
- 3/21/11 Hold
- 3/11/11 Rally on inflation fears.

AGG—Aggregate Bond Market

- 5/16/11 Still uptrending
- 5/9/11 Nice inverted head and shoulders pattern with correct volume tendencies. Breakout, however, should see some increasing volume.
- 5/2/11 Established channel up.
- 4/25/11 Volume dried up on the recent sell off last week, suggesting a bottom.
- 4/18/11 Buy.

BWX—International TBond

- 5/16/11 The ETF has corrected to a good entry point on its solid uptrend line.

Each chart shows daily prices (top portion), volume (bottom portion), a moving average (smoothed red line on price portion, a relative strength indicator between the ETF and AGG (Aggregated bond ETF) (orange line), and red spikes. The spikes show potential places to buy and sell short. If the moving average is trending down, the spike shows a potential sell shorts. If the moving average is trending up, the spike shows potential buys. The charts do not show selling or covering signals.

WEEKLY REVIEW

5/16/11 No changes.

5/9/11 The last two positions were stopped out. But I will reenter the small cap position (IWM) as noted. SLV has taken a nose dive to around \$34.70. See page 11.

5/2/11 A couple positions were stopped out. I'll let things settle down and then look to take further action.

4/25/11 Given the negative divergences in the various market indexes and given that the Russell 2000 (IWM) was the leader, I'll take profits now.

4/18/11 We were stopped out of XLE last week. Sold back to cash.

4/11/11 Please note that I've raised the stop prices as of 4/8 (last Friday)

4/4/11 The two shorts were stopped out at small losses. The long positions continue to climb.

This page shows the top ranked ETF Growth Database. It shows performance over the last 12, 9, 6, 3, and 1 months through the previous month's end. V is Volatility. NAV is price. CS is Comet Strength (not shown). C is Comet, which is an ETF's risk-adjusted performance; the higher the better (not shown). This gives us the Rank column (shown).

Generally speaking, we want to own the top-ranked ETFs with 5 and 4 comets. (Comets, not stars, because unlike stars that are fixed, comets come into and out of prominence. We want our thinking, our metaphor aligning with reality.

This shows the ETF Growth Database and Ranking. It shows performance over the last 12, 9, 6, 3, and 1 months through the previous month's end. V is Volatility. NAV is price. Rank shows the number of comets from 5 to 1. The larger the better.

Growth Charts

SLV—Silver

5/16/11 Breathtaking. SLV is now at an uptrend line that might hold a bit. But like when they raised the margin requirements when the Hunt Brothers tried to corner silver, the downside target of \$30 and even \$18-20 should be well respected. The stop certainly helped.

5/9/11 That is a typical parabolic move ending, except it should really drop at least to the trend line, if not below.

5/2/11 Stopped out. But parabolic move may continue. Just have to see.

DBA—Agriculture

5/16/11 At support. Have reentered.

5/9/11 At support.

5/2/11 Consolidation.

4/25/11 No change.

4/18/11 No change.

4/11/11 Well defined up trend.

IWM—Russell 2000

5/16/11 Pulled back and reentered.

5/9/11 Reenter after being stopped out.

5/2/11 Still moving up.

4/25/11 Possible intermediate-term topping area circled on the chart.

4/18/11 No change.

Each chart shows daily prices (top portion), volume (bottom portion), a moving average (smoothed red line on price portion), a relative performance indicator between the ETF and S&P 500 (orange line), and red spikes. The spikes show potential buy and sell short signals. Generally speaking, if the moving average is trending down, the spike shows a potential sell short. If the moving average is trending up, but the ETF declines, the spike shows a potential buy. The charts do not show selling or covering signals.

(Continued from page 1) **REVIEW**

to bear or from bear to bull where we find those divergences and use them as warnings.

As such, if the market had not returned to “in gear”, we would be looking for a final top in this period for the current bull market that began back in March, 2009.

But, since the market is back “in gear”, even though it may correct further from here, the final top is yet to be seen; it is still expected in the future. At least in 30 years of investing, I haven’t seen a bear market unfold without negative divergences first showing up. There are no guarantees when it comes to investing of

course.

This same scenario, where the market was “in gear”, yet had a noticeable correction happened back in April, 2010 through June, 2010. It was a fairly steep correction, but going into it, the markets were “in gear”. So, it could and did correct, but the strategy remained that the market should still hit recovery highs.

At the time, the Dow Industrials had dropped about 1600 points or 14%. Many were calling for a bear market at the time. The recovery was in question and double dip recession was still in the forefront of economist thinking. The financial crisis had not been fully resolved and unem-

ployment was above 10%. It was still perilous times and the market was reacting.

But, going into that reaction, the market had been “in gear”. I expected another rally, not a new bear market.

So, in today’s market, we find the same situation. Things are “in gear”, but corrections will occur. They should still be used to accumulate stocks.

It is on the next rally that we will again watch for any negative divergences to occur that will provide us with a warning. Others may be giddy with rallying gladness, but it would be time to take some money off the table.

5/16/11 No changes. I expect to begin some backtesting of the model that combines selecting/timing this week.

5/9/11 The monthly risk-adjusted performance rankings of the monitored ETFs is updated through 4/30/11.

5/2/11 No changes.

4/25/11 I plan to add additional ETFs to the database for ranking and sorting and performance. It is currently about 250.

I have completed a model structuring that combines ETF-specific timing with selecting. Back testing is now required. If long-term (10 years) results come in better, then I will let subscribers know of a potential change.

4/18/11 I updated the symbols for the Powershares Small Cap sector ETFs. These will show up next month.

No other changes.

Descriptions & Disclosures

PORTFOLIO DESCRIPTIONS (pages 2 and 6)

Our guiding goal is to provide the most return with the least risk consistently over time through bull and bear markets.

Income Portfolio, page2: Uses a proprietary selection methodology on all of the monitored bond-oriented ETFs to pick the top ETFs. I then use a proprietary timing model to decide whether to buy, sell, hold, or avoid.

Growth Portfolio, page 6: Uses the same methodologies as in the Income Portfolio, except as it is applied to stock-oriented ETFs.

All portfolios were started on 1/1/10 with \$100,000.

Portfolio changes will usually be made at the close on Monday, unless otherwise noted in any emailed hotline update or triggered stop orders. Issues are normally posted on Mondays by 1:30pm cst.

Portfolios are updated through the Friday close the week before.

Dividends are reinvested in additional shares. Commissions of \$10/trade and short-term redemption charges, if any, are applied.

Interest is zero for the money market (cash) position.

SUBSCRIPTIONS: To receive *ETF Selections & Timing*, you may subscribe in one of three ways. You may subscribe on the web site InvestmentST.com using PayPal or call 1-800-800-6563 for Visa or MasterCard orders or send a check to the address on the front page. Subscriptions may be tax deductible.

The recurring monthly subscription is \$24.00. An annual subscription is \$240.00. Subscribers receive this weekly eNewsletter. There is no mailed issue. Subscribers retrieve the current weekly issue at the web site InvestmentST.com by logging in using a log in name and password.

Unless otherwise noted, the weekly eNewsletter is posted by 1:30 PM central time each Monday, except for holidays and then on Tuesday. It may contain actionable, specific buy or sell advice to take that day at the Monday close in each portfolio. We may also use stop orders. Portfolio data will be updated through the previous Friday's close. Fund symbols, rather than names, are the official identification used for activity.

GUARANTEE: Subscriptions may be cancelled at any time. Annual subscriptions are refundable for the weekly term remaining with a four-week minimum charge, using a 52-week count. Monthly subscriptions just expire.
