Barely Back

Both the Dow Industrials and Dow Transports have made it back to new highs, though the Transports barely so. Technically speaking, therefore, things are back in gear to the upside.

On a sentiment level, however, investors remain too bull-

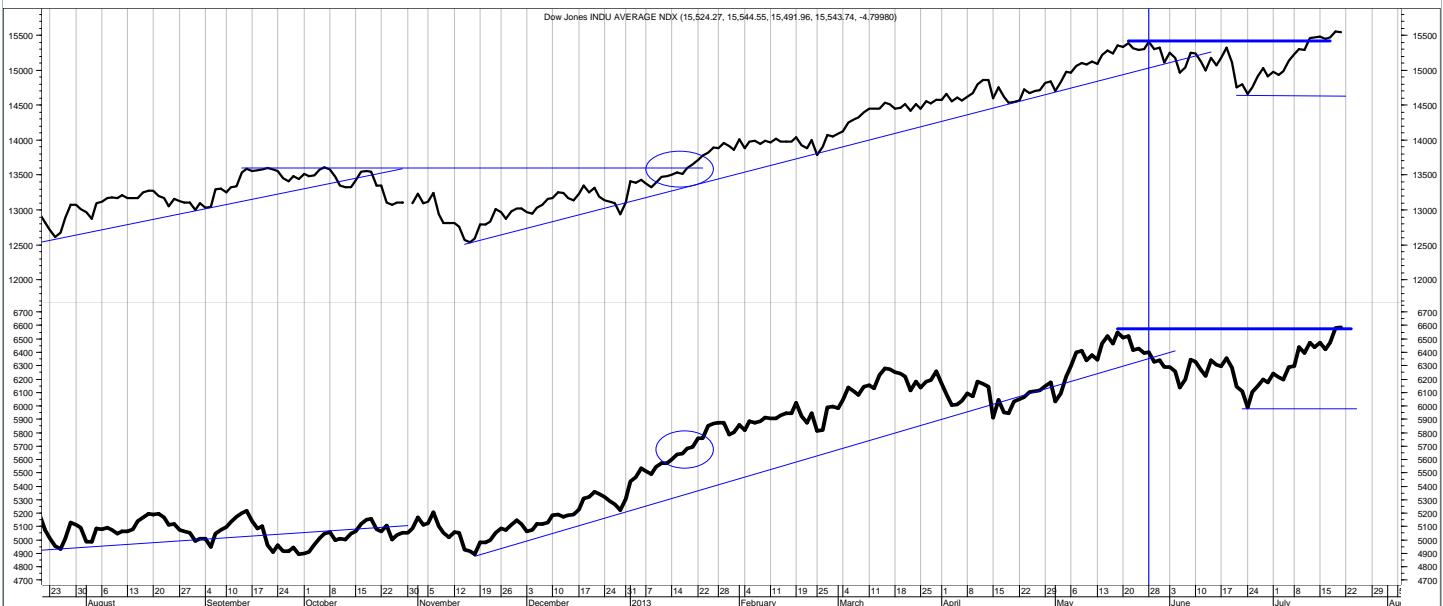

ish, especially professionals like letter editors. The new information here, however, is that the individual investor is finally turning more bullish. On the face of it, these things remain bearish.

On the economy, it remains in growth mode, but is also

slowing. GDP estimates have been coming down. Same with S&P 500 earnings estimates. Earnings in fact have apparently peaked for this cycle.

At the same time, there is no recession in sight. The lead-

(Continued on bottom right on page 12
see REVIEW on top)

This is the daily chart of the Dow Industrials (top) and Transports (bottom).

WEEKLY REVIEW

7/22 Note the raised stop level on AGG. It should not close below that, but should continue higher near 108 (the next upside target).

7/15 The initial target for AGG was to close the gap. It has done so. Will monitor to see if it maintains the new uptrend that is forming. The fundamentals appear to be supportive of higher prices.

7/8 Will look to buy AGG with a close stop and a trading target to close the gap (see page 5).

7/1 Still oversold and will watch for an entry point.

6/24 Oversold in the bond market, but the stops will likely be triggered. See the new page 13. Will watch for daily reentry points. Watch for emails.

	2010	2011	2012	ytd 2013	Incptn	SD
ETF Income Portfolio	4.8%	3.6	4.8	0.2	14.0	4.0
Aggregate Bond	2.5%	4.3	0.9	-3.4	4.2	2.6

This shows the returns of previous years, year to date (ytd), and from inception (incptn). It also shows standard deviation (SD).

This is the ETF Income Database and Ranking. It shows performance over the last 12, 9, 6, 3, and 1 months through the previous month's end. V is Volatility. NAV is price. CS is Comet Strength (not shown). C is Comet (not shown), which is an ETF's risk-adjusted performance; the higher the better. V, CS, and C are proprietary tools. Rank column shows the number of comets.

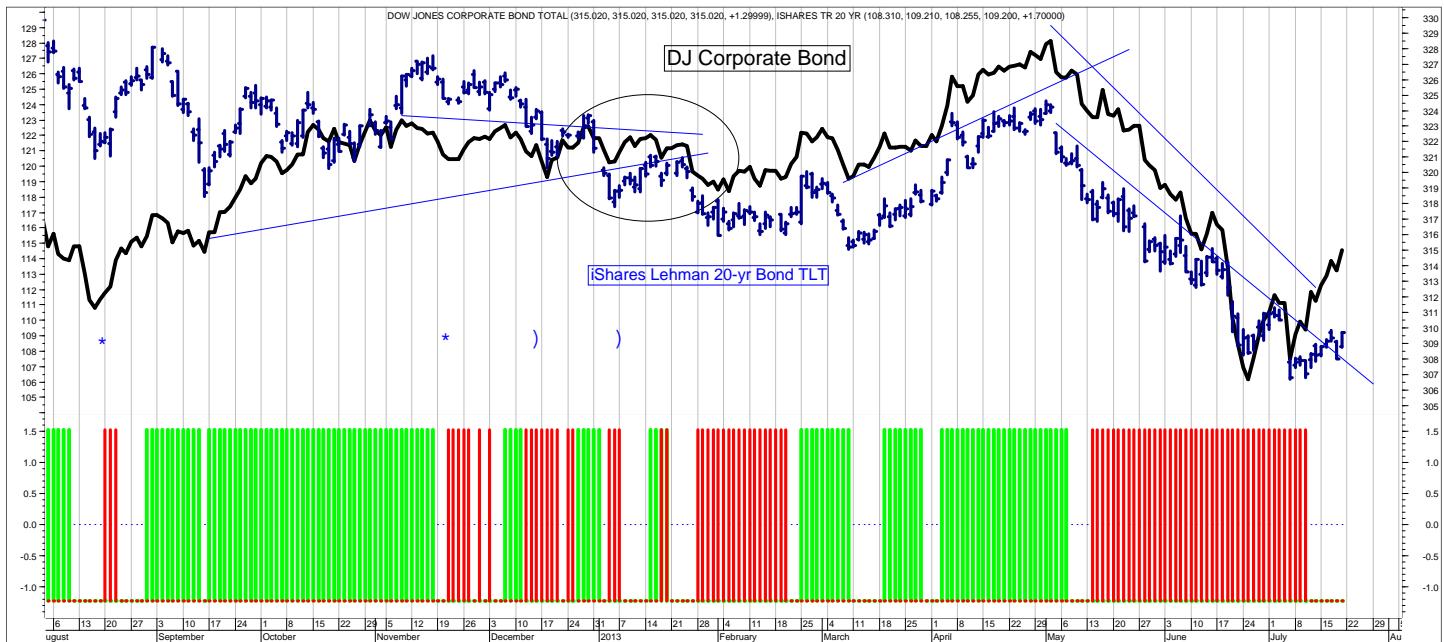

ETF LEGEND for pages 3 (Bond), and 7, 8, 9, and 10 (Equity):

Column headings: The first column shows the ETF name, the second column shows it symbol. The third column shows the ETF Style. The first letter is always either B (Bond) or E (Equity) or H (Hybrid). The next letter(s) is the style. So, BS-bond short, BI-bond intermediate, BL-bond long, BF-flexible, BW-world, BH-high yield. And for Equity, EA-equity aggressive, EC-equity contrary, EG-equity gold (precious metals), ESC-small cap, EMC-mid cap, ELC-large cap, EW-world, EGI-growth/income, ERE-real estate, EV-value.

Columns 4-8 shows percentage returns for the periods shown (12 months, 9, 6, 3, and 1 month). Column 9 is V (volatility); a measure of risk; the lower the V, the less risk. Column 10 is the NAV. Column 11 is the C (comet) ranking. C is the risk-adjusted (V) relative performance (CS). The higher the C indicates the most return for the amount of risk taken.

Generally, our ETF strategy is to own the top ranked ETFs (shown in green) and avoid or short the lower ranked ETFs (shown in red).

SLM Bond Timing Model

The SLM Bond Timing Model is based on the expected direction of the Corporate Bond market. The green bars are bullish (expect higher prices and lower yields) and the red bars are bearish (expect lower prices and higher yields). White spaces indicate that the previous signal is still in effect.

WEEKLY REVIEW

7/22 The down trends (latest blue lines) have been broken as noted on the chart above. I have a close stop on AGG. It would be normal for the market to pullback, but if it continues higher, we want to participate.

7/15 While the Bond Barometer remains bearish because it is trend following, I have bought AGG in anticipation of a bounce as mentioned last week.

7/8 Oversold with a decent (low risk, high reward potential) trade. See page 2 and 5.

7/1 Still oversold. Will watch for testing and backfilling to form a tradeable bottom.

6/24 Oversold.

6/17 Bonds still negative, but watching for a turning point. The Fed is still committed to easing.

6/10 Trend still up for yields and down for prices (the chart above shows prices). It's been a quick sentiment change when the Fed just began talking about its end game for removing quantitative easing. A couple of months ago they had said they wouldn't make changes until unemployment reaches 6.5%, but with unemployment at 7.6% as of the latest reporting period (May), it is apparently getting close enough to start talking about it. Still "talk" itself is not action, so a buying zone may be getting set up.

Income Charts (DAILY)

LQD—Investment Grade Corporate

7/22 Expect a pullback to the broken down trend line (latest blue line).

7/15 Got the short-term bounce, but the intermediate-term trend remains down. More backing and filling should be expected.

7/8 Short-term bottom bounce due.

7/1 Watch for bottom.

6/24 Oversold.

6/17 Potential buy spike.

AGG—Aggregate Bond Market

7/22 Bounce underway. Note the thicker blue line that indicates the top in bonds.

7/15 Next target is 108.

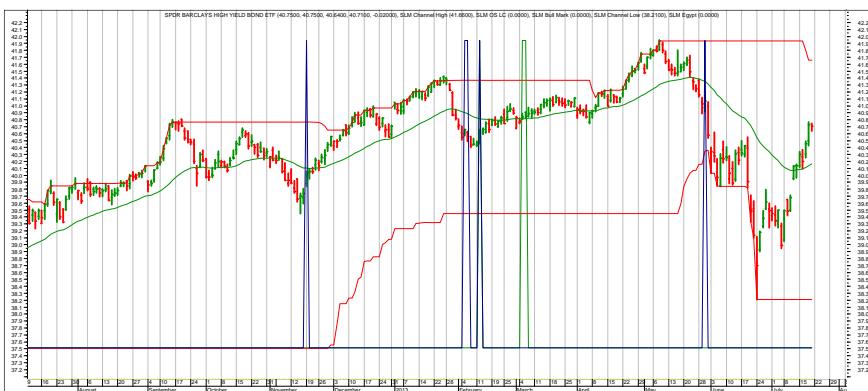

7/8 Tradeable bounce.

7/1 No changes.

6/24 Oversold.

6/17 Another potential buy spike.

6/10 Lows didn't hold. Long-term up-trend line also broken.

JNK—hi-yield bonds

7/22 Big bounce in JNK.

7/15 In the bounce, will now watch for

7/8 Yield highest in a year, so bounce due.

7/1 Watch for retest.

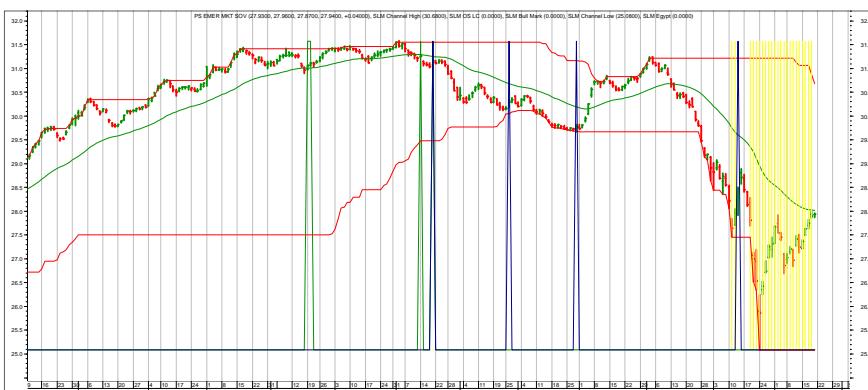

6/24 Oversold.

6/17 Possibly forming a bottom.

6/10 Also in a sharp selloff.

6/3 Broke its uptrend. Watch stop level.

5/28 Pullback to support. See page 2.

PCY---International Bonds

7/22 Back to moving average resistance.

7/15 Though bounced, still very oversold.

7/8 International central banks will keep rates low they say. Bonds should rebound.

7/1 Very oversold.

6/24 Still very oversold.

6/17 Yellow bars indicate very oversold.

Each chart shows daily (or weekly if noted in page title at top) prices, a moving average (smoothed green line on price portion), and spikes. The spikes show potential buy signals. The charts do not show sell signals.

Growth Portfolio (changed as of 12/10/12)

WEEKLY REVIEW

7/22 No change.

7/15 No change.

7/8 With the stock markets rallying again, the sell stop is inching away.

	2010	2011	2012	ytd 2013	Incptn	SD
ETF Growth Portfolio	8.1%	6.9	-2.1	14.5	29.4	5.4
World Growth Index	17.2%	-4.2	14.3	17.2	50.4	10.5

The ETF Growth Portfolio changed as of 12/10/12. It is following the new World Growth Model (WGM), which uses the same 5 etfs (EEM, EFA, IWM, QQQ, SPY) as the World Growth Index (WGI). The difference between the two is WGM uses timing and WGI is always fully invested. WGI is rebalanced to 20% in each position daily (this accounts for the different returns when WGM is invested).

Returns are of previous years, year to date (ytd), and from inception (incptn). It also shows standard deviation (SD).

Work continues on the selecting model, which, if warranted, will be implemented in this Portfolio.

This page shows the top ranked ETF Growth Database. It shows performance over the last 12, 9, 6, 3, and 1 months through the previous month's end. V is Volatility. NAV is price. CS is Comet Strength (not shown). C is Comet, which is an ETF's risk-adjusted performance; the higher the better (not shown). This gives us the Rank column (shown).

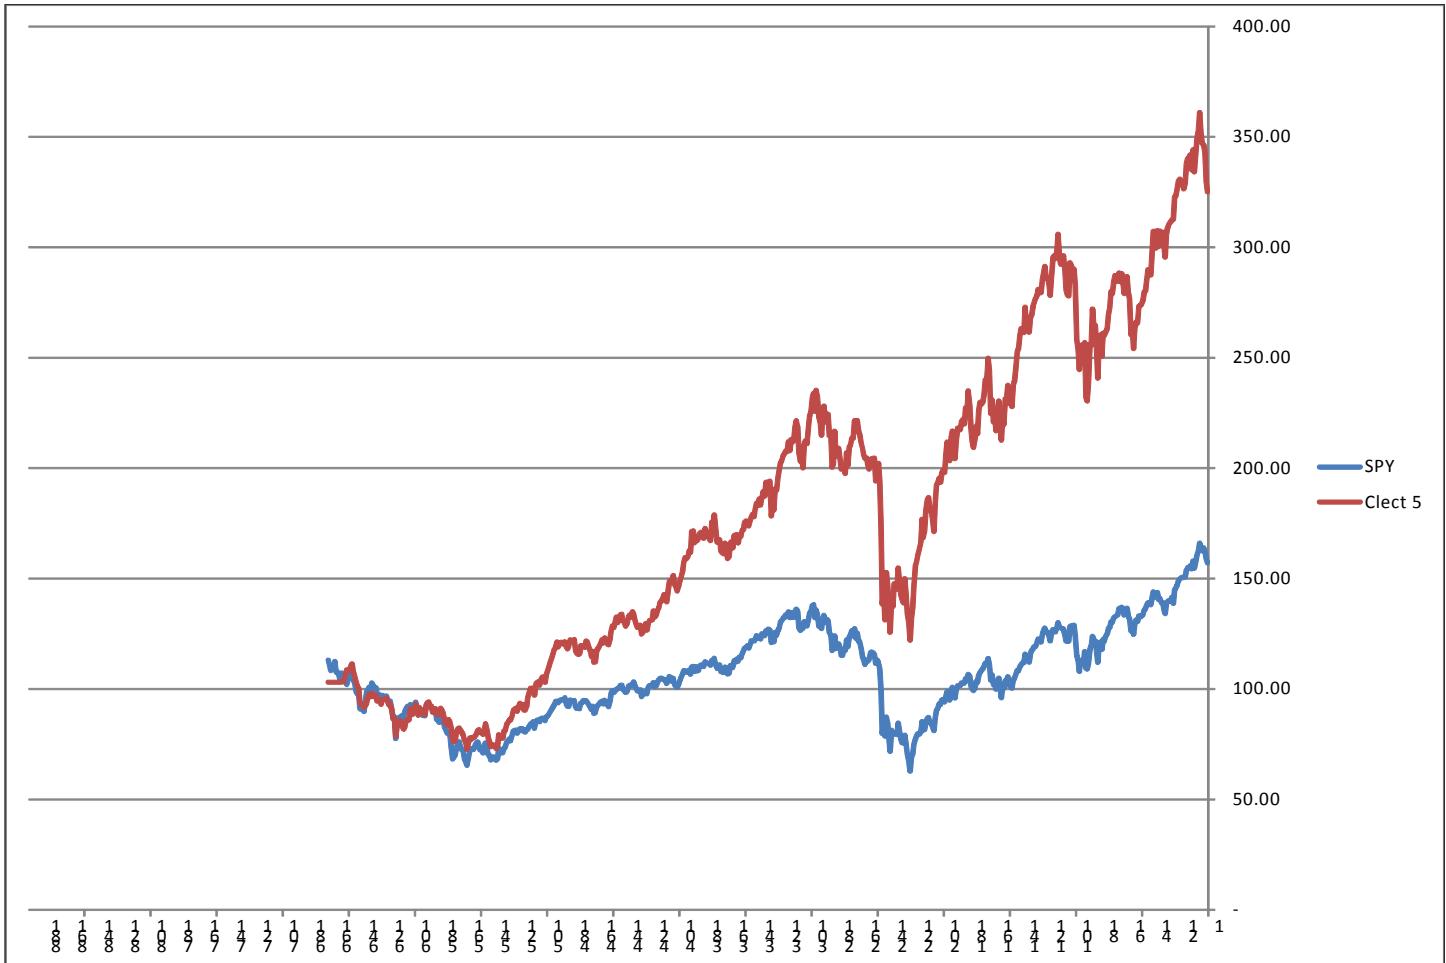

Generally speaking, we want to own the top-ranked ETFs with 5 and 4 comets. (Comets, not stars, because unlike stars that are fixed, comets come into and out of prominence. We want our thinking, our metaphor aligning with reality.

Bottom ETF Growth Ranking to same month end

This shows the ETF Growth Database and Ranking. It shows performance over the last 12, 9, 6, 3, and 1 months through the previous month's end. V is Volatility. NAV is price. Rank shows the number of comets from 5 to 1. The larger the better.

C-lect 5 (last week was C-lect 10)

The weekly chart above shows a preliminary back test of the new selecting model from 9/29/2000 through the present. It is called C-lect 5. The results from this look promising. As you can see, the upside was substantially better when invested using the top ETFs as measured by their risk-adjusted relative performance.

C, of course, stands for comet; it is the risk-adjusted relative performance. 5 is the number of ETFs used out of a basket of 35. I plan to expand the basket, but the 35 were the oldest and most liquid.

Over the time period shown, SPY gained 53% and C-lect 5 gained 216%. (C-lect 10 shown last week gained 148%.) Evidently the concentration (5 instead of 10) helped the upside.

One caveat was the number of trades, though with 5 instead of 10, this would be less. Commissions to buy and sell were not included as costs, but I plan to add this as the back testing continues. There was nearly always an exchange from one ETF to another to be made weekly, though not of all 5 funds.

I also back tested some other indicators, but none worked as well as C. I also added some timing both directly on the etfs and on the market overlay. Adding timing also improves results. But for this testing, I wanted to actually test a stand alone selecting method that does better than the market.

So, the testing continues on the selecting side. When completed, the market or direct fund timing will be added and results should improve. One preliminary timing overlay has results exceeding 300% return over the back test period; it always helps to try to avoid losing money.

Overflow from Page 1, Definitions, and Newsletter Updates

(Continued from page 1) **REVIEW**

ing economic indicators continue to trend higher.

Were the Federal Reserve to follow through on its commentary of tapering their bond buying (quantitative easing), the stage is set for the economy to at least muddle along. Stocks may hang in there with it, but if rates rise, stocks should be further negatively impacted.

So, for now, we remain fully invested, but continue to closely monitor parameters to move fairly quickly to the exits if needed.

Having gone through two severe bear markets of drops of 40% over the last decade, we are due for a third one eventually.

Please see the individual portfolio pages for any changes.

Just to clarify a couple of terms that I use regularly.

Short-term is days to weeks.

Intermediate-term is weeks to months.

Long-term is months to years.

Cyclical is 1-5 years.

Secular is 5 years to decades.

Bull market is a series of higher highs and higher lows.

Bear market is a series of lower lows and lower highs.

Neutral market is sideways without a discernible pattern.

Oddly, bull and bear markets may occur simultaneously, but only over different time periods. For example, we may be in a secular bear market, but there are cyclical bull and bear markets within that.

Closing stops are “mental”. I look at the position at quarter to the close. If it is trading below the stop (or above if short), then I act with the assumption the security will trigger that closing stop on that day. I sell (or cover) at the close that day.

New portfolio stops for the World Growth Model are being implemented. These are internally maintained because they may change daily. They will be emailed when close or if triggered.

7/22 Work continues on the new selecting model. Shown on the previous page is Clect 5 and 20 week moving average on each ETF.

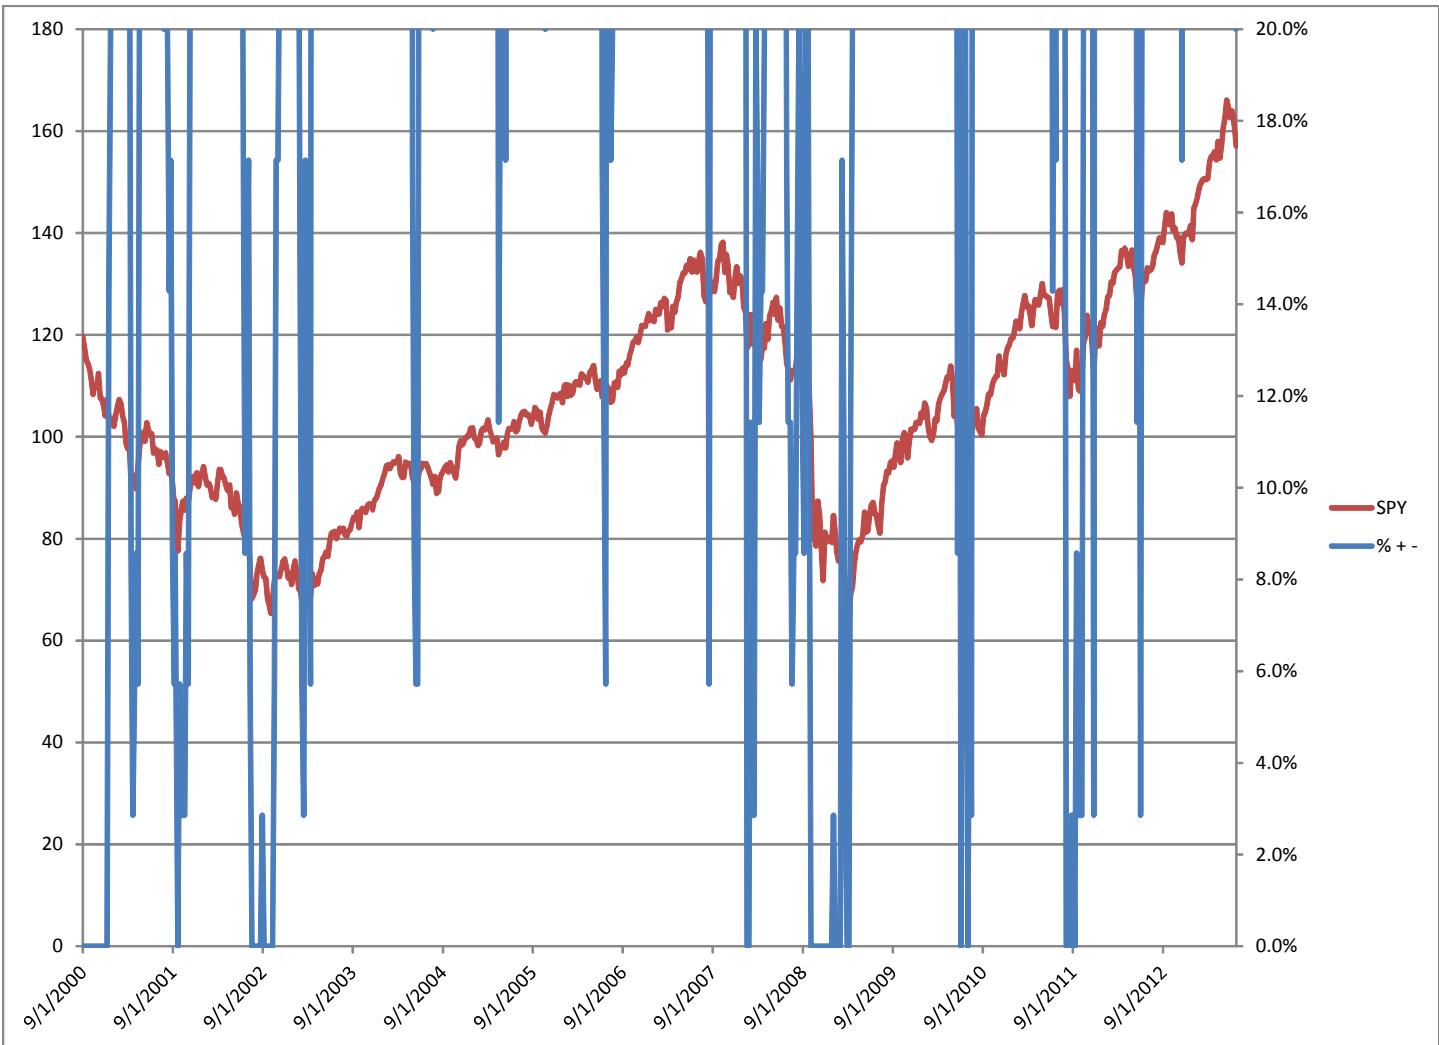

7/15 C-lect 5 is shown this week. It is based on selecting the top 5 ETFs on a weekly basis by the top C (risk-adjusted relative performance). It too is only the selection process without timing. The final model will include both selections and timing.

7/8 The monthly ETF rankings though 6/30 have been updated. When the C-lection model is done, the plan is to change the rankings to weekly. Incidentally, the C-lect model may end up being 10 or 8 or 12; it depends on the backtesting results. We want diversification that improves results, but not diversification for the sake of diversification.

7/1 C-lect 10 model preliminary results shown.

6/24 New page 13 added.

% of 35 ETFs above or below Moving Average

From a basket of 35 ETFs, the chart above shows the percentage of ETFs above a simple 20-week moving average (blue bars). The SPY (S&P 500) is the red line.

The point is to show that when the percentage of ETFs falls below 20%, the market may be considered oversold and due for a rally. However, in a bear market, the percentage may fall as low as 0% (none above their 20-week moving average).

Currently, the market is not oversold.

Descriptions & Disclosures

PORFOLIO DESCRIPTIONS (pages 2 and 6)

Our guiding goal is to provide the most return with the least risk consistently over time through bull and bear markets.

Income Portfolio, page2: Uses a proprietary selection methodology on all of the monitored bond-oriented ETFs to pick the top ETFs. I then use a proprietary timing model to decide whether to buy, sell, hold, or avoid. From time to time, timing considerations may take precedence over selections; in other words, we may own lower ranked funds because of anticipated timing changes.

Growth Portfolio, page 6: As of 12/10/12, it is based on the World Growth Index (WGI), which is made up of a static fully invested 20% in each of five ETFs (EEM, EFA, IWM, QQQ, SPY). The Portfolio will buy and sell the WGI based on proprietary timing signals.

Both portfolios were started on 1/1/10 with \$100,000. However, the Growth Portfolio strategy was changed on 12/10/12 to the World Growth Model.

Portfolio changes will usually be made at the close on Monday, unless otherwise noted in any emailed hotline update or triggered stop orders. Issues are normally posted on Mondays by 1:35pm cst (Tuesday if Monday is a holiday).

Portfolios are updated through the Friday close the week before.

Dividends are reinvested in additional shares.

Commissions of \$10 per trade are applied. Interest is zero for the money market (cash) position.

SUBSCRIPTIONS: To receive *ETF Selections & Timing*, you may subscribe in one of three ways. You may subscribe on the web site InvestmentST.com using PayPal or call 1-800-800-6563 for Amex, Visa, MasterCard, or Discover orders or send a check to the address on the front page. Subscriptions may be tax deductible.

The recurring monthly subscription is \$24.00. An annual subscription is \$240.00. Subscribers receive this weekly eNewsletter. There is no mailed issue. Subscribers retrieve the current weekly issue at the web site InvestmentST.com by logging in with a user name and password. There may also be emailed Hotline reports sent between issues.

Unless otherwise noted, the weekly eNewsletter is posted by 1:35 PM central time each Monday, except for holidays and then on Tuesday. It may contain actionable, specific buy or sell advice to take that day at the Monday close in each portfolio. We may also use stop orders. For stops, check the ETF at quarter to the close. If it is below (or above) a stop level, assume it will close there and act on that. Portfolio data will be updated through the previous Friday's close. Fund symbols, rather than names, are the official identification used for activity.

GUARANTEE: Subscriptions may be cancelled at any time. Annual subscriptions are refundable for the weekly term remaining with a four-week minimum charge, using a 52-week count. Monthly subscriptions just expire.
