 Issue 33

Rates and Risk

Unlike the stock market's previous breakout in January 2013, this breakout over the last month has not been as successful. In fact, the market has dropped back down below the breakout levels. This is potentially very worrisome. These two occurrences

are circled on the chart below.

The primary difference between then and now is the direction of interest rates. Eight months ago rates were falling (bond prices rising). Today rates are rising (bond prices falling). The Federal Reserve has begun to signal the possibil-

ity of tapering its bond buying program (aka quantitative easing). Bonds are selling off in reaction to this.

As a result, yields are higher than they were at the beginning of the year.

(Continued on bottom right on page 12 see REVIEW on top)

This is the daily chart of the Dow Industrials (top) and Transports (bottom).

WEEKLY REVIEW

8/19 In San Francisco at the MoneyShow, I was one of four on a Forbes panel. It is interesting that we are all fairly negative on the bond market. The Fed's taper talk is hitting bonds and sentiment. At some point, a counter rally is due and we will try to trade it.

8/12 No changes. I still expect some backing and filling without a discernible uptrend as the bond market digests the large possibility the Fed will taper their bond buying program next month.

8/5 Still waiting in cash.

7/29 Stopped out of AGG. We'll sit in cash and wait for another trade.

	2010	2011	2012	ytd 2013	Incptn	SD
ETF Income Portfolio	4.8%	3.6	4.8	-0.1	13.7	4.0
Aggregate Bond	2.5%	4.3	0.9	-4.9	2.6	2.6

This shows the returns of previous years, year to date (ytd), and from inception (incptn). It also shows standard deviation (SD).

This is the ETF Income Database and Ranking. It shows performance over the last 12, 9, 6, 3, and 1 months through the previous month's end. V is Volatility. NAV is price. CS is Comet Strength (not shown). C is Comet (not shown), which is an ETF's risk-adjusted performance; the higher the better. V, CS, and C are proprietary tools. Rank column shows the number of comets.

ETF LEGEND for pages 3 (Bond), and 7, 8, 9, and 10 (Equity):

Column headings: The first column shows the ETF name, the second column shows its symbol. The third column shows the ETF Style. The first letter is always either B (Bond) or E (Equity) or H (Hybrid). The next letter(s) is the style. So, BS-bond short, BI-bond intermediate, BL-bond long, BF-flexible, BW-world, BH-high yield. And for Equity, EA-equity aggressive, EC-equity contrary, EG-equity gold (precious metals), ESC-small cap, EMC-mid cap, ELC-large cap, EW-world, EGI-growth/income, ERE-real estate, EV-value. Columns 4-8 show percentage returns for the periods shown (12 months, 9, 6, 3, and 1 month). Column 9 is V (volatility); a measure of risk; the lower the V, the less risk. Column 10 is the NAV. Column 11 is the C (comet) ranking. C is the risk-adjusted (V) relative performance (CS). The higher the C indicates the most return for the amount of risk taken.

Generally, our ETF strategy is to own the top ranked ETFs (shown in green) and avoid or short the lower ranked ETFs (shown in red).

SLM Bond Timing Model

The SLM Bond Timing Model is based on the expected direction of the Corporate Bond market. The green bars are bullish (expect higher prices and lower yields) and the red bars are bearish (expect lower prices and higher yields). White spaces indicate that the previous signal is still in effect.

WEEKLY REVIEW

8/19

8/12 Still bumping along a possible bottom. Watching for a decent entry point.

8/5 Watching for an entry point.

7/29 Trend reversal is noted on the Barometer. I will watch for a pullback to pick another entry point.

7/22 The down trends (latest blue lines) have been broken as noted on the chart above. I have a close stop on AGG. It would be normal for the market to pullback, but if it continues higher, we want to participate.

7/15 While the Bond Barometer remains bearish because it is trend following, I have bought AGG in anticipation of a bounce as mentioned last week.

7/8 Oversold with a decent (low risk, high reward potential) trade. See page 2 and 5.

7/1 Still oversold. Will watch for testing and backfilling to form a tradeable bottom.

Income Charts (DAILY)

LQD—Investment Grade Corporate

8/19 Watch for support at previous low, but see AGG comments.
 8/12 No changes.
 8/5 No changes.
 7/29 Watch for a pullback.
 7/22 Expect a pullback to the broken down trend line (latest blue line).

AGG—Aggregate Bond Market

8/19 AGG is falling below a key support level; probably there are a lot of stops getting taken out. We are already long gone and watching the action from the sidelines. There are times when this type of trade makes a good entry point with its upside potential outweighing its near stop. We will email you, if it sets up, between issues.
 8/5 No changes.
 7/29 Stopped out. Will watch to reenter.

JNK—hi-yield bonds

8/19 No changes.
 8/12 No changes.
 8/5 No changes.
 7/29 Should close gap up. May buy then.
 7/22 Big bounce in JNK.
 7/15 In the bounce, will now watch for
 7/8 Yield highest in a year, so bounce due.
 7/1 Watch for retest.

PCY—International Bonds

8/19 Will watch for possible reentry points in the weeks ahead.
 8/12 No changes. Watch for trend break (blue line).
 8/5 No changes.
 7/29 Need more pullback.
 7/22 Back to moving average resistance.
 7/15 Though bounced, still very oversold.
 7/8 International central banks will keep rates low they say. Bonds should rebound.

Each chart shows daily (or weekly if noted in page title at top) prices, a moving average (smoothed green line on price portion), and spikes. The spikes show potential buy signals. The charts do not show sell signals.

Growth Portfolio (changed as of 12/10/12)

WEEKLY REVIEW

8/19 No change. The question is whether this pullback will turn into something worse. Key levels to watch are previous lows set in June.

8/12 No change.

8/5 No change.

7/29 No change. Still fully invested.

	2010	2011	2012	ytd 2013	Incptn	SD
ETF Growth Portfolio	8.1%	6.9	-2.1	14.0	28.9	5.4
World Growth Index	17.2%	-4.2	14.3	16.2	49.1	10.5

The ETF Growth Portfolio changed as of 12/10/12. It is following the new World Growth Model (WGM), which uses the same 5 etfs (EEM, EFA, IWM, QQQ, SPY) as the World Growth Index (WGI). The difference between the two is WGM uses timing and WGI is always fully invested. WGI is rebalanced to 20% in each position daily (this accounts for the different returns when WGM is invested).

Returns are of previous years, year to date (ytd), and from inception (incptn). It also shows standard deviation (SD).

Work continues on the selecting model, which, if warranted, will be implemented in this Portfolio.

This page shows the top ranked ETF Growth Database. It shows performance over the last 12, 9, 6, 3, and 1 months through the previous month's end. V is Volatility. NAV is price. CS is Comet Strength (not shown). C is Comet, which is an ETF's risk-adjusted performance; the higher the better (not shown). This gives us the Rank column (shown).

Generally speaking, we want to own the top-ranked ETFs with 5 and 4 comets. (Comets, not stars, because unlike stars that are fixed, comets come into and out of prominence. We want our thinking, our metaphor aligning with reality.

This shows the ETF Growth Database and Ranking. It shows performance over the last 12, 9, 6, 3, and 1 months through the previous month's end. V is Volatility. NAV is price. Rank shows the number of comets from 5 to 1. The larger the better.

C-lect 5 (reiteration)

The weekly chart above shows a preliminary back test of the new selecting model from 9/29/2000 through the present. It is called C-lect 5. The results from this look promising. As you can see, the upside was substantially better when invested using the top ETFs as measured by their risk-adjusted relative performance.

C, of course, stands for comet; it is the risk-adjusted relative performance. 5 is the number of ETFs used out of a basket of 35. I plan to expand the basket, but the 35 were the oldest and most liquid.

Over the time period shown, SPY gained 53% and C-lect 5 gained 216%. (C-lect 10 shown last week gained 148%.) Evidently the concentration (5 instead of 10) helped the upside.

One caveat was the number of trades, though with 5 instead of 10, this would be less. Commissions to buy and sell were not included as costs, but I plan to add this as the back testing continues. There was nearly always an exchange from one ETF to another to be made weekly, though not of all 5 funds.

I also back tested some other indicators, but none worked as well as C. I also added some timing both directly on the etfs and on the market overlay. Adding timing also improves results. But for this testing, I wanted to actually test a stand alone selecting method that does better than the market.

So, the testing continues on the selecting side. When completed, the market or direct fund timing will be added and results should improve. One preliminary timing overlay has results exceeding 300% return over the back test period; it always helps to try to avoid losing money.

Overflow from Page 1, Definitions, and Newsletter Updates

(Continued from page 1) *REVIEW*

In turn higher yields may lead to a couple of additional issues.

One higher yields provides competition for the investor dollar.

Two higher yields may keep economic growth in check as borrowers must pay more in interest costs. This may negatively impact major decisions like buying a new car or a new house.

At the same time, given the rise in rates, we should not make

a foregone conclusion that the economy will necessarily enter into a recession any time soon.

As such, it is far from clear that the stock market, with its current breakout failure, has entered into the beginnings of a sustained bear market with losses exceeding the typical 30%.

So, the rise in rates is worrisome, but not necessarily forecasting a stock bear market.

As usual, we will monitor the trends and stops each day.

Please see the individual portfolio pages for any changes.

Just to clarify a couple of terms that I use regularly.

Short-term is days to weeks.

Intermediate-term is weeks to months.

Long-term is months to years.

Cyclical is 1-5 years.

Secular is 5 years to decades.

Bull market is a series of higher highs and higher lows.

Bear market is a series of lower lows and lower highs.

Neutral market is sideways without a discernible pattern.

Oddly, bull and bear markets may occur simultaneously, but only over different time periods. For example, we may be in a secular bear market, but there are cyclical bull and bear markets within that.

Closing stops are "mental". I look at the position at quarter to the close. If it is trading below the stop (or above if short), then I act with the assumption the security will trigger that closing stop on that day. I sell (or cover) at the close that day.

New portfolio stops for the World Growth Model are being implemented. These are internally maintained because they may change daily. They will be emailed when close or if triggered.

8/12 No changes.

8/5 No changes.

7/29 No new updates.

7/22 Work continues on the new selecting model. Shown on the previous page is Clect 5 (last week inadvertently mentioned a 20-week moving average overlay).

7/15 C-lect 5 is shown this week. It is based on selecting the top 5 ETFs on a weekly basis by the top C (risk-adjusted relative performance). It too is only the selection process without timing. The final model will include both selections and timing.

7/8 The monthly ETF rankings though 6/30 have been updated. When the C-lection model is done, the plan is to change the rankings to weekly. Incidentally, the C-lect model may end up being 10 or 8 or 12; it depends on the backtesting results. We want diversification that improves results, but not diversification for the sake of diversification.

% of ETFs Above 35-week moving average (reiteration)

Last week was an oversold indicator. This week's chart shows an overbought indicator. The time period is the same, except the blue bars begin in January 2007 (not prior).

From a basket of 35 ETFs, the chart above shows the percentage of ETFs above a simple 35-week moving average (blue bars). The SPY (S&P 500) is the red line.

The point is to show that when the percentage of ETFs above their 35-week moving average nears 100%, the market may be considered overbought and due for a selloff. The exception to this is when the market comes out from a major bear market bottom. It will move to oversold, but not be followed by a correction. The other times a correction follows.

Currently, the market is overbought.

Descriptions & Disclosures

PORTFOLIO DESCRIPTIONS (pages 2 and 6)

Our guiding goal is to provide the most return with the least risk consistently over time through bull and bear markets.

Income Portfolio, page 2: Uses a proprietary selection methodology on all of the monitored bond-oriented ETFs to pick the top ETFs. I then use a proprietary timing model to decide whether to buy, sell, hold, or avoid. From time to time, timing considerations may take precedence over selections; in other words, we may own lower ranked funds because of anticipated timing changes.

Growth Portfolio, page 6: As of 12/10/12, it is based on the World Growth Index (WGI), which is made up of a static fully invested 20% in each of five ETFs (EEM, EFA, IWM, QQQ, SPY). The Portfolio will buy and sell the WGI based on proprietary timing signals.

Both portfolios were started on 1/1/10 with \$100,000. However, the Growth Portfolio strategy was changed on 12/10/12 to the World Growth Model.

Portfolio changes will usually be made at the close on Monday, unless otherwise noted in any emailed hotline update or triggered stop orders. Issues are normally posted on Mondays by 1:35pm cst (Tuesday if Monday is a holiday).

Portfolios are updated through the Friday close the week before.

Dividends are reinvested in additional shares.

Commissions of \$10 per trade are applied. Interest is zero for the money market (cash) position.

SUBSCRIPTIONS: To receive *ETF Selections & Timing*, you may subscribe in one of three ways. You may subscribe on the web site InvestmentST.com using PayPal or call 1-800-800-6563 for Amex, Visa, MasterCard, or Discover orders or send a check to the address on the front page. Subscriptions may be tax deductible.

The recurring monthly subscription is \$24.00. An annual subscription is \$240.00. Subscribers receive this weekly eNewsletter. There is no mailed issue. Subscribers retrieve the current weekly issue at the web site InvestmentST.com by logging in with a user name and password. There may also be emailed Hotline reports sent between issues.

Unless otherwise noted, the weekly eNewsletter is posted by 1:35 PM central time each Monday, except for holidays and then on Tuesday. It may contain actionable, specific buy or sell advice to take that day at the Monday close in each portfolio. We may also use stop orders. For stops, check the ETF at quarter to the close. If it is below (or above) a stop level, assume it will close there and act on that. Portfolio data will be updated through the previous Friday's close. Fund symbols, rather than names, are the official identification used for activity.

GUARANTEE: Subscriptions may be cancelled at any time. Annual subscriptions are refundable for the weekly term remaining with a four-week minimum charge, using a 52-week count. Monthly subscriptions just expire.
