October 28, 2013 (data date through previous Friday close)

Volume 4

Issue 43

Moving Along

The Dow Industrials continues to inch higher to its previous high, which if it does would suggest that the market is back in gear to the upside. It would join the already made highs of the Dow Transports. The chart below shows these things.

Until then, caution is the watch word. As well, confirmation of this as a top would not arrive until both indexes close below their previous lows (circled on the chart below).

The debt drama is over in Washington, at least for the moment, and disaster avoided. The

fall out in terms of weaker economic numbers due to the closure, however, is not yet felt.

In the meantime, investor sentiment continues to ratchet upwards to extreme bullish readings.

(Continued on bottom right on page 12 see REVIEW on top)

This is the daily chart of the Dow Industrials (upper) and Dow Transports (lower)

SCOREBOARD (returns year to date and past weeks to date)

WEEKLY REVIEW

10/28 Time to take short-term profits in both positions as they look to have 'rolled over'. Will watch for reentry points in the weeks ahead.

10/21 Raised the stop levels again to follow the market as it climbs.

10/14 Please note the raised stop levels.

10/7 No changes.

9/30 No changes.

9/23 No changes.

	2010	2011	2012	ytd 2013	Incptn	SD
ETF Income Portfolio	4.8%	3.6	4.8	1.3	15.4	4.5
Aggregate Bond	2.5%	4.3	0.9	-2.9	4.7	2.5

This shows the returns of previous years, year to date (ytd), and from inception (incptn). It also shows standard deviation (SD).

This is the ETF Income Database and Ranking. It shows performance over the last 12, 9, 6, 3, and 1 months through the previous month's end. V is Volatility. NAV is price. CS is Comet Strength (not shown). C is Comet (not shown), which is an ETF's risk-adjusted performance; the higher the better. V, CS, and C are proprietary tools. Rank column shows the number of comets.

ETF LEGEND for pages 3 (Bond), and 7, 8, 9, and 10 (Equity):

Column headings: The first column shows the ETF name, the second column shows its symbol. The third column shows the ETF Style. The first letter is always either B (Bond) or E (Equity) or H (Hybrid). The next letter(s) is the style. So, BS-bond short, BI-bond intermediate, BL-bond long, BF-flexible, BW-world, BH-high yield. And for Equity, EA-equity aggressive, EC-equity contrary, EG-equity gold (precious metals), ESC-small cap, EMC-mid cap, ELC-large cap, EW-world, EGI-growth/income, ERE-real estate, EV-value.

Columns 4-8 show percentage returns for the periods shown (12 months, 9, 6, 3, and 1 month). Column 9 is V (volatility); a measure of risk; the lower the V, the less risk. Column 10 is the NAV. Column 11 is the C (comet) ranking. C is the risk-adjusted (V) relative performance (CS). The higher the C indicates the most return for the amount of risk taken.

Generally, our ETF strategy is to own the top ranked ETFs (shown in green) and avoid or short the lower ranked ETFs (shown in red).

SLM Bond Timing Model

The SLM Bond Timing Model is based on the expected direction of the Corporate Bond market. The green bars are bullish (expect higher prices and lower yields) and the red bars are bearish (expect lower prices and higher yields). White spaces indicate that the previous signal is still in effect.

WEEKLY REVIEW

10/28 Taking some profits, as the market looks extended and topy, but will look to reenter on pullbacks.

10/21 Rally still on, as market starts to focus on new Chairman Yellen policies to maintain accommodative Fed.

10/14 Intermediate-term trend is still up.

10/7 Consolidating the recent jump, as bonds move sideways. Economy is muddling along and taper talk is off, so may see some further gains.

9/30 Bonds popped up through the short-term down trend line. Expect some pullback and consolidation and then we'll see.

9/23 Tapering has been postponed because the economic numbers are coming in weaker than expected. Bonds rallied on the news.

9/16 The bond market is bumping along what will turn out to either be a bottom or a ledge. We will get more information this week in the Fed meeting and potential tapering. Bonds will either move above or below their trend lines shown above.

Income Charts (DAILY)

LQD—Investment Grade Corporate

10/28 Short-term pause and pullback expected.
 10/21 No changes.
 10/14 No changes.
 10/7 No changes.
 9/30 Popped through resistance.

AGG—Aggregate Bond Market

10/28 Short-term top expected.
 10/21 No changes.
 10/14 No changes.
 10/7 No changes.
 9/30 Popped through resistance.
 9/23 No changes.
 9/16 Holding.
 9/9 Stopped out. Will watch to reenter.

JNK—hi-yield bonds

10/28 Short-term pause expected.
 10/21 Pop on through its “triangle pattern”. Will watch for pullbacks for potential entry points.
 10/14 No changes.
 10/7 No changes.
 9/30 No changes.

PCY—International Bonds

10/28 Short-term top expected. Will watch for a pullback to reenter.
 10/21 No changes.
 10/14 Moving higher.
 10/7 No changes.
 9/30 No changes.
 9/23 No changes. Holding for now.

Each chart shows daily (or weekly if noted in page title at top) prices, a moving average (smoothed green line on price portion), and blue or green spikes. The spikes show potential buy signals. The red lines are price channels. The charts do not show sell signals.

WEEKLY REVIEW

10/28 No changes to the portfolio.

10/21 Two things. One is to make the lateral trade from PBE to DFE. A lateral trade is where the percentage invested remains about the same. Two is the stop loss is now about 10% away from current prices. The window to buy new positions has been closed for a couple of months now, so what about buying back the positions from the sell last week? As mentioned last week, the question would become whether or not it is worthwhile in terms of risk and reward to get back in? Given the closed window and the negative divergence and sentiment issues (see page 1 article), a wait and see position is best.

Plus TAN is looking like it is going "exponential", which is when the price rate of change increases to unsustainable levels. This signals a top, not opportunity. We will see what happens here.

10/14 As noted in the front page article, the risk of loss substantially outweighs the upside potential. So as noted above in the box to the left, sell 1/2 of each position in the Growth Portfolio back to cash. Next week we will see if it warrants getting back in.

	2010	2011	2012	ytd 2013	Incptn	SD
ETF Growth Portfolio	8.1%	6.9	-2.1	24.7	41.0	7.9
World Growth Index	17.2%	-4.2	14.3	25.4	60.8	15.1

The ETF Growth Portfolio changed as of 12/10/12. It is following the new World Growth Model (WGM), which uses the same 5 etfs (EEM, EFA, IWM, QQQ, SPY) as the World Growth Index (WGI). The difference between the two is WGM uses timing and WGI is always fully invested and WGI is rebalanced to 20% in each position daily (this accounts for the different returns when WGM is invested and held).

Based on the successful back testing strategy, C-lect 5 was added to the portfolio on 9/23/13.

Returns are of previous years, year to date (ytd), and from inception (incptn). It also shows standard deviation (SD).

This page and the next three show the equity ETF database rankings from high to low based on C. C is Comet, which is the risk-adjusted relative performance; the higher the C ranking, the better. Comet, not stars, because comets come into and out of prominence over time.

The first column shows the name. The second column shows the symbol. The third column shows the style; it begins with E for Equity and then the style (A is aggressive, W is world, WR is world regional, SC is small cap, MC is mid cap, LC is large cap, GI is growth/income, V is value). The fourth column shows the C level.

C-lect 5 (reiteration)

The new selecting and timing model is completed under the name of C-lect 5.

The chart above shows only the C-lect 5 without any market timing. The point with this is to show that staying with the leading ETFs is a winning strategy over time, even without employing market timing.

With market timing, the huge bear market downturns should be avoided.

Overflow from Page 1, Definitions, and Newsletter Updates

(Continued from page 1) **REVIEW**

This combination of weaker internals, ignored economic fundamentals, and increased investor bullishness may eventually pose some problems for the remainder of the year.

On the other hand, the Federal Reserve appears intent on maintaining its easy money policies of the last few years, keeping rates near zero and buying bonds. Taper talk has also tapered off for now. Fed actions are the main bullish factors driving stocks into overbought, overvalued territory.

An example of the overvaluation is the CAPE (PE-10, an averaged 10 year inflation adjusted PE ratio, Robert Shiller); it is at

24.8. The chart from 1880 through the present is shown below.

So, the momentum and trend of the market is up, the Fed is behind the move, but the market is overvalued.

Please see the individual portfolio pages for any updates and changes.

Just to clarify a couple of terms that I use regularly.

Short-term is days to weeks.

Intermediate-term is weeks to months.

Long-term is months to years.

Cyclical is 1-5 years.

Secular is 5 years to decades.

Bull market is a series of higher highs and higher lows.

Bear market is a series of lower lows and lower highs.

Neutral market is sideways without a discernible pattern.

Oddly, bull and bear markets may occur simultaneously, but only over different time periods. For example, we may be in a secular bear market, but there are cyclical bull and bear markets within that.

Closing stops are “mental”. I look at the position at quarter to the close. If it is trading below the stop (or above if short), then I act with the assumption the security will trigger that closing stop on that day. I sell (or cover) at the close that day.

Portfolio stops for the World Growth Model are internally maintained; they are based on the Wrlld Grth Index, not the individual ETFs. They will be emailed when close or if triggered.

10/28 No changes.

10/21 Work continues on the “shorting/inverse” portfolio and will begin on the new World Income Index (WII).

10/15 Again to clarify, the equity ETF rankings shown on pages 7-10 are now based on weekly C data. The bond ETF rankings are still based on monthly C data.

Plans are underway to investigate a new bond model based on a similar approach as the World Growth Index.

10/7 Just to clarify what was said last week, the ETF rankings in this newsletter are now based on their weekly C. Previously they were based on monthly numbers. On my NLMFS&T Newsletter, fund (and ETF) rankings are still determined by monthly data (no changes planned there). This means that the two C numbers between the two newsletters will not match. The C selection rankings should be somewhat close, but will not be identical. The process of determining C, however, is the same with both. C is the risk-adjusted relative strength number. The higher the number, the better.

I still plan to introduce a portfolio based on shorting the weakest ETFs based on the weakest C, if the back testing shows good results. The weak C ETFs are shown in red on page 10.

Buy Window for WGM Open or Closed (closed currently)

The chart above shows the World Growth Model (Port, blue line) and “Diff” (red line; the windows for potential buying opportunities after an initial timing model buy). The “x” axis shows data points, rather than dates, but it is from 9/3/2002 through the present. The potential window to buy is when the red line drops below 1%.

“Diff” is measuring the difference between where the World Growth Model is priced and where the potential sell stop price is. The idea is not to chase the market higher, but wait for lower risk entry points when the market pulls back.

This window is also important because it shows subsequent potential entry points after an initial buy.

Currently the window is closed, suggesting that the market is overextended. This is not to say, however, that the market is at a top. “Diff” does not measure this. It only measures the opportunities of buying on pullbacks at lower risk entry points.

Descriptions & Disclosures

PORTFOLIO DESCRIPTIONS (pages 2 and 6)

Our guiding goal is to provide the most return with the least risk consistently over time through bull and bear markets.

Income Portfolio, page 2: Uses a proprietary selection methodology on all of the monitored bond-oriented ETFs to pick the top ETFs. I then use a proprietary timing model to decide whether to buy, sell, hold, or avoid. From time to time, timing considerations may take precedence over selections; in other words, we may own lower ranked funds because of anticipated timing changes.

Growth Portfolio, page 6: As of 12/10/12, it is based on the World Growth Index (WGI), which is made up of a static fully invested 20% in each of five ETFs (EEM, EFA, IWM, QQQ, SPY). The Portfolio will buy and sell the WGI based on proprietary timing signals. On 9/23/13, the new C-lect 5 is also part of this portfolio. It too uses timing.

Both portfolios were started on 1/1/10 with \$100,000. However, the Growth Portfolio strategy was changed on 12/10/12 to the World Growth Model and again on 9/23/13 to incorporate the C-lect 5 model.

Portfolio changes will usually be made at the close on Monday, unless otherwise noted in any emailed hotline update or triggered stop orders. Issues are normally posted on Mondays by 1:35pm cst (Tuesday if Monday is a holiday).

Portfolios are updated through the Friday close the week before.

Dividends are reinvested in additional shares.

Commissions of \$10 per trade are applied. Interest is currently zero for the money market (cash) position.

SUBSCRIPTIONS: To receive *ETF Selections & Timing*, you may subscribe in one of three ways. You may subscribe on the web site InvestmentST.com using PayPal or call 1-800-800-6563 for Amex, Visa, MasterCard, or Discover orders or send a check to the address on the front page. Subscriptions may be tax deductible.

The recurring monthly subscription is \$24.00. An annual subscription is \$240.00. Subscribers receive this weekly eNewsletter. There is no mailed issue. Subscribers retrieve the current weekly issue at the web site InvestmentST.com by logging in with a user name and password. There may also be emailed Hotline reports sent between issues.

Unless otherwise noted, the weekly eNewsletter is posted by 1:35 PM central time each Monday, except for holidays and then on Tuesday. It may contain actionable, specific buy or sell advice to take that day at the Monday (or Tuesday) close in each portfolio. We may also use stop orders. For stops, check the ETF at quarter to the close. If it is below (or above) a stop level, assume it will close there and act on that. Portfolio data will be updated through the previous Friday's close. Fund symbols, rather than names, are the official identification used for activity.

GUARANTEE: Subscriptions may be cancelled at any time. Annual subscriptions are refundable for the weekly term remaining with a four-week minimum charge, using a 52-week count. Monthly subscriptions just expire.
