Yield

It's beginning to look a lot like Christmas and we still don't appear any closer to a Fiscal Cliff deal. The talk has been all about raising taxes and precious little about cutting spending.

We know the payroll tax of 2% will be reinstated for every-

one. We know the Obamacare tax will also kick in, though primarily it hits higher earners. Beyond that, we guess. Will tax brackets be raised? Will deductions be eliminated or loopholes closed? Will dividend and capital gains taxes be changed? What about corporate taxes,

how will they be increased?

And they think they can settle these things in how many working days are left?

Spending we haven't even talked about.

If the Office of Manage-

WEEKLY REVIEW

12/3 No changes. Fiscal cliff with its implied recession looms. Typically a recession is bullish for higher grade bonds, though not necessarily for hi-yield (junk) bonds.

11/26 No changes.

11/19 Given the Fed will buy mortgage-backed securities, it's a wonder MBB hasn't moved up.

11/12 No changes.

	2010	2011	ytd 2012	Incptn	SD
ETF Income Portfolio	4.8%	3.6	5.4	14.5	3.2
Aggregate Bond	2.5%	4.3	1.8	8.8	2.2

This shows the returns of previous years, year to date (ytd), and from inception (incptn). It also shows standard deviation (SD).

This is the ETF Income Database and Ranking. It shows performance over the last 12, 9, 6, 3, and 1 months through the previous month's end. V is Volatility. NAV is price. CS is Comet Strength (not shown). C is Comet (not shown), which is an ETF's risk-adjusted performance; the higher the better. V, CS, and C are proprietary tools. Rank column shows the number of comets.

ETF LEGEND for pages 3 (Bond), and 7, 8, 9, and 10 (Equity):

Column headings: The first column shows the ETF name, the second column shows its symbol (due to our data provider, symbols may end in a "D"; it should be ignored). The third column shows the ETF Style. The first letter is always either B (Bond) or E (Equity) or H (Hybrid). The next letter(s) is the style. So, BS-bond short, BI-bond intermediate, BL-bond long, BF-flexible, BW-world, BH-high yield. And for Equity, EA-equity aggressive, EC-equity contrary, EG-equity gold (precious metals), ESC-small cap, EMC-mid cap, ELC-large cap, EW-world, EGI-growth/income, ERE-real estate, EV-value.

Columns 4-8 show percentage returns for the periods shown (12 months, 9, 6, 3, and 1 month). Column 9 is V (volatility); a measure of risk; the lower the less risk. Column 10 is the NAV. Column 11 is the C (comet) ranking. C is the risk-adjusted (V) relative performance (CS-not shown). The higher the C indicates the most return for the amount of risk taken.

Generally, our ETF strategy is to own the top ranked ETFs (shown in green) and avoid or short the lower ranked ETFs (shown in red).

SLM Bond Timing Model

The SLM Bond Timing Model is based on the expected direction of the Corporate Bond market. The green bars are bullish (expect higher prices and lower yields) and the red bars are bearish (expect lower prices and higher yields). White spaces indicate that the previous signal is still in effect.

WEEKLY REVIEW

12/3 As mentioned last week, over the past year the sell signals (red vertical bars on chart above) have actually been good buying areas. In previous years, however, the sell signals should be respected. Perhaps the difference is simply a recognition of conflicting secular (5-20 years) and cyclical (1-5) year cycles. If the secular trend for bonds is up (higher prices, lower yields), then cyclical or intermediate (1-12 months) should be viewed as entry/buy areas, rather than sell times. If, however, the secular trend is down, then sell points are truly exit points. It's a recognition of the clash between varying cycles.

11/26 Although the Bond Timing Model (based on Corporates only) went on a sell signal (shown in red above), I have noted before that in this ongoing secular bond bull market, these sell signals have really been fairly good entry areas to buy or buy more. So, if you're looking to buy, this looks to be a good time. If you're already invested, holding is warranted. If you're leveraged, though, it would be a time to lighten up. The Treasury market has been playing catch-up to the Corporate market.

11/19 Trend up continues.

11/12 Catch up apparent.

Income Charts

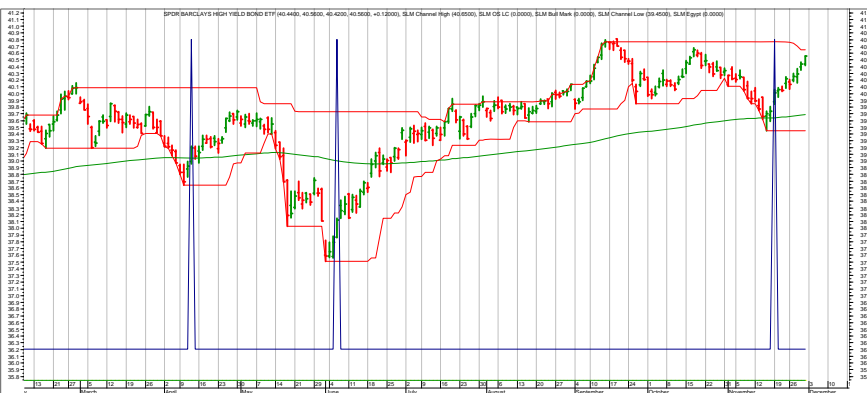

LQD—Investmt Grd Corporate

12/6 No changes.
 11/26 Still bullish. Good entry area (see page 4)
 11/19 Pullback within a bull market.
 11/12 Pullback within a bull market.
 10/30 No changes.
 10/22 No changes.
 10/15 Rally on.

TLH—10-20 year Treasuries

12/6 No changes.
 11/26 Still bullish.
 11/19 Jump through downtrend line is bullish.
 11/12 Rally.
 10/30 Good entry area.
 10/22 Buying on the pullback, expecting higher prices.

JNK—high-yield bonds

12/3 The blue vertical bars are new timing signals I'm investigating.
 11/26 Monitoring.
 11/19 Getting closer to major support.
 11/12 Pullback.
 10/30 Watching for a significant pullback. (gold bars)
 10/22 No comment.

MBB—mortgage backed

12/3 As mentioned under JNK, the blue bars are new timing signals I'm investigating. The issue is the number of false positives (a buy signal that doesn't make money).
 11/26 At major support and needs to rally to confirm.
 11/19 Correction down to major support.

Each chart shows daily prices, a moving average (smoothed red line on price portion), and spikes. The spikes show potential buy and sell short signals. Generally speaking, if the moving average is trending down, the spike shows a potential sell short. If the moving average is trending up, the spike shows a potential buy. The charts do not show selling or covering signals.

This page shows the top ranked ETF Growth Database. It shows performance over the last 12, 9, 6, 3, and 1 months through the previous month's end. V is Volatility. NAV is price. CS is Comet Strength (not shown). C is Comet, which is an ETF's risk-adjusted performance; the higher the better (not shown). This gives us the Rank column (shown).

Generally speaking, we want to own the top-ranked ETFs with 5 and 4 comets. (Comets, not stars, because unlike stars that are fixed, comets come into and out of prominence. We want our thinking, our metaphor aligning with reality.

LONG-TERM COMPARISON WORLD GROWTH

The chart above compares the past nine years of the backtested World Growth Model with a buy/hold of the same five underlying indexes (EEM, EFA, IWM, QQQ, SPY). Dividends are reinvested. No commissions included to buy/sell. Past performance does not guarantee future performance.

The five ETF indexes are static; that is, they were the only ETFs used over the nine year period. So, the selecting model was static. No attempt was made to buy the top-ranked by C (risk-adjusted relative performance) ETFs. Presumably, if the top ETFs had been picked, the performance would be greater.

What was used for this Model was a newish timing model that combines a number of features, including two timing models with two stop orientations. The clearest use of stops is shown in the 2008 bear market. It erased all of the gains of the buy/hold index from 12/6/2002, while the WG Model was stopped out back to cash, thus preventing further losses.

I've begun to implement this Model in this Newsletter based on these results.

As mentioned, the next step remains to incorporate the selecting model (buy the top ETFs by C) with the timing model.

Overflow from Page 1, Definitions, and Newsletter Updates

(Continued from page 1) **REVIEW**

ment and Budget (OMB) is right, early 2013 will be the start of a recession. Assuming no solution is forthcoming before 12/31, what should we begin to see to confirm this? A couple of things.

The leading economic indicators from the Conference Board should begin to roll downward. Right now they have been moving sideways since May.

We should see the stock market begin to reflect this new reali-

ty of an earnings slowdown. It should take out previous lows set up in mid November.

Unemployment and consumers are at best coincident if not lagging indicators, so while they may remain strong, they shouldn't be used to forecast.

At the same time, the Fed is fully committed to keeping interest rates down. This, generally speaking, still remains the stock market's most bullish of indicators.

So, I remain fairly cautious. Please see the specific portfolio pages for changes and updates.

Just to clarify a couple of terms that I use regularly.

Short-term is days to weeks.

Intermediate-term is weeks to months.

Long-term is months to years.

Cyclical is 1-5 years.

Secular is 5 years to decades.

Bull market is a series of higher highs and higher lows.

Bear market is a series of lower lows and lower highs.

Neutral market is sideways without a discernible pattern.

Oddly, bull and bear markets may occur simultaneously, but only over different time periods. For example, we may be in a secular bear market, but there are cyclical bull and bear markets within that.

Closing stops are "mental". I look at the position at quarter to the close. If it is trading below the stop (or above if short), then I act with the assumption the security will trigger that closing stop on that day. I sell (or cover) at the close that day.

New portfolio stops are being implemented. These are internal and will be emailed if triggered.

12/3 See page 11 for more details.

11/26 World Growth Index introduced. It is made up of 20% of EEM, EFA, IWM, QQQ, and SPY.

11/19 No changes.

11/12 Portfolio stops (in addition to specific ETF stops) are being implemented. These will be emailed for action the next day, if triggered.

11/5 ETF rankings by C (comet) through 10/31/12 are shown. ETF LEGEND is new on page 3.

Descriptions & Disclosures

PORTFOLIO DESCRIPTIONS (pages 2 and 6)

Our guiding goal is to provide the most return with the least risk consistently over time through bull and bear markets.

Income Portfolio, page2: Uses a proprietary selection methodology on all of the monitored bond-oriented ETFs to pick the top ETFs. I then use a proprietary timing model to decide whether to buy, sell, hold, or avoid.

Growth Portfolio, page 6: New selecting and timing model is nearing completion.

Both portfolios were started on 1/1/10 with \$100,000.

Portfolio changes will usually be made at the close on Monday, unless otherwise noted in any emailed hotline update or triggered stop orders. Issues are normally posted on Mondays by 1:35pm cst (Tuesday if Monday is a holiday).

Portfolios are updated through the Friday close the week before.

Dividends are reinvested in additional shares. Commissions of \$10/trade and short-term redemption charges, if any, are applied.

Interest is zero for the money market (cash) position.

Wilshire 5000 TR (total return) includes dividend reinvestment. This is a broad based index of domestic stocks.

SUBSCRIPTIONS: To receive *ETF Selections & Timing*, you may subscribe in one of three ways. You may subscribe on the web site InvestmentST.com using PayPal or call 1-800-800-6563 for Amex, Visa, MasterCard, or Discover orders or send a check to the address on the front page. Subscriptions may be tax deductible.

The recurring monthly subscription is \$24.00. An annual subscription is \$240.00. Subscribers receive this weekly eNewsletter. There is no mailed issue. Subscribers retrieve the current weekly issue at the web site InvestmentST.com by logging in with a user name and password.

Unless otherwise noted, the weekly eNewsletter is posted by 1:35 PM central time each Monday, except for holidays and then on Tuesday. It may contain actionable, specific buy or sell advice to take that day at the Monday close in each portfolio. We may also use stop orders. For stops, check the ETF at quarter to the close. If it is below (or above) a stop level, assume it will close there and act on that. Portfolio data will be updated through the previous Friday's close. Fund symbols, rather than names, are the official identification used for activity.

GUARANTEE: Subscriptions may be cancelled at any time. Annual subscriptions are refundable for the weekly term remaining with a four-week minimum charge, using a 52-week count. Monthly subscriptions just expire.
