Back In Gear To The Upside

Both the Transports and the Industrials have moved into recovery high territory, thus confirming that the bull market remains alive and well.

Higher highs and higher lows essentially define a bull market. Conversely, if the market is making lower lows and lower highs, then a bear market, by definition, is in effect.

How much longer might the bull market last from this point forward?

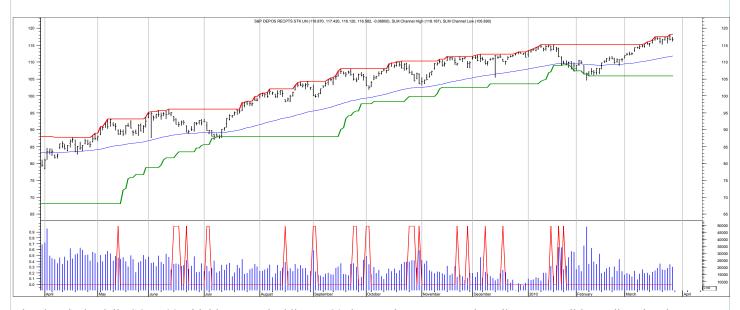

If it were average, it would extend about another 12 months.

How much higher might it go?

If it were average, it would increase another 50% from here.

To be sure, the market may extend its duration and magnitude from here, but just as easily it could also end. It is simply within the bounds of historic bull markets at this time.

The chart is the daily S&P 500 with blue smoothed line an 80-day moving average. The spikes are possible trading signals.

The two columns to the left show the rankings of the equity oriented ETFs in our database through the previous Friday's close.

These rankings are based on momentum indicators around which we generally want to trade. Our general strategy is to invest with the stronger performing ETFs by investing with the main trend and against the minor trend down. This means that in a bear (down) market, we want to short the funds that rally against their main trend downward. In a bull market, we want to buy during selloffs with the main trend up.

(Continued from page 1) REVIEW

So, sell offs should continue to be used to accumulate additional shares of stocks, ETFs, and mutual funds.

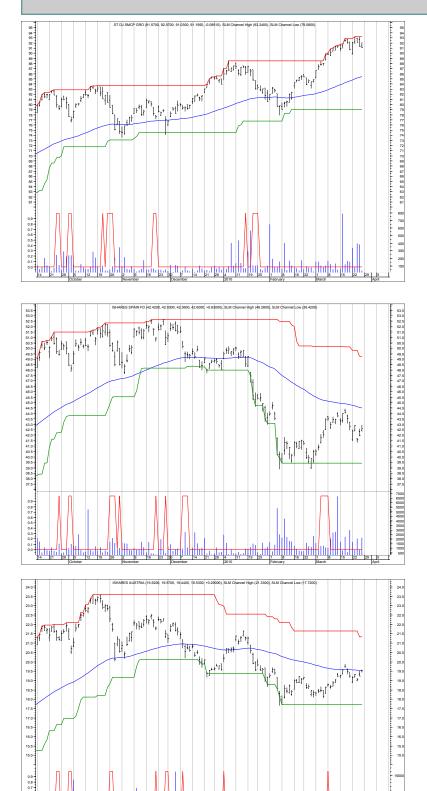

The key thing to watch going forward will most likely be the direction of interest rates. As long as they remain low, the market will remain "cheap". But once they start moving up, they provide a lower risk competition and valuations decrease.

For now, however, the bull market remains in gear to the upside.

PORTFOLIO DESCRIPTIONS (pages 2 and 3)

Our guiding goal is to provide the most return with the least risk consistently over time through bull and bear markets.

Income Portfolio, page2: Uses a proprietary selection methodology on all of the monitored bond-oriented ETFs to pick the top ETFs. I then use a proprietary timing model to decide whether to buy, sell, hold, or avoid.

Growth Portfolio, page 3: Uses the same methodologies as in the Income Portfolio, except as it is applied to stock-oriented ETFs.

All portfolios were started on 1/1/10 with \$100,000.

Portfolio changes will usually be made at the close on Monday, unless otherwise noted in any emailed hotline update. Issues are normally posted on Mondays by 1:30pm cst.

Portfolios are updated through the Friday close the week before.

Dividends are reinvested in additional shares. Commissions of \$5/trade and short-term redemption charges, if any, are applied. Interest is zero for the money market (cash) position.
