### West and East Met

Unlike the muted US recovery, China seems to be doing well. Their purchasing managers index came in better than expected in October. 20 straight months of expansion. Their inflation is also increasing. So they raised interest rates. In turn this supports the yuan. For the US, it's not like we are still in recession. Our economy has recovered. Our GDP is growing. Corporate earnings have recovered to near where they were prior to the financial implosion of two years ago. So, what's the problem? Why hasn't the stock market yet recovered as well?

10% unemployment is one reason. This has been the longest post recession recovery without a corresponding increase in hiring.

The two columns to the left show the rankings of the equity oriented ETFs in our database through the previous Friday's close.

These rankings are based on momentum indicators around which we generally want to trade. Our general strategy is to invest with the stronger performing ETFs by investing with the main trend and against the minor trend down. This means that in a bear (down) market, we want to short the funds that rally against their main trend downward. In a bull market, we want to buy during selloffs with the main trend up.

#### (Continued from page 1) **REVIEW**

other reason. There are still too many underwater loans out there. The asset value doesn't cover the loan. If the bank had to mark the asset to its value, its solvency eventually comes into question. This has been the 20 year problem in Japan. Deflation. Likewise, the US keeps its interest rates very low, which hurts the dollar. It becomes a vicious cycle.

So, the US has ended up as the biggest debtor nation and China the biggest creditor nation.

As to the stock market, I still expect some pullback. It continues to trade near what should be a top area. This week should be interesting with the elections and with the quantitative easing schedules.

I'll let things ride as they are for now.

#### **PORTFOLIO DESCRIPTIONS (pages 2 and 3)**

Our guiding goal is to provide the most return with the least risk consistently over time through bull and bear markets.

Income Portfolio, page2: Uses a proprietary selection methodology on all of the monitored bond-oriented ETFs to pick the top ETFs. I then use a proprietary timing model to decide whether to buy, sell, hold, or avoid.

Growth Portfolio, page 3: Uses the same methodologies as in the Income Portfolio, except as it is applied to stock-oriented ETFs.

All portfolios were started on 1/1/10 with \$100,000.

Portfolio changes will usually be made at the close on Monday, unless otherwise noted in any emailed hotline update. Issues are normally posted on Mondays by 1:30pm cst.

Portfolios are updated through the Friday close the week before.

Dividends are reinvested in additional shares. Commissions of \$5/trade and short-term redemption charges, if any, are applied. Interest is zero for the money market (cash) position.
