# **Divergences Worsen**

Some investors try to follow trends, like moving averages. When an index closes above or below the moving average, they buy or sell. Aside from whipsaws (very short term buy/sell signals), the trouble with trends is that they take time to develop. By the time you get

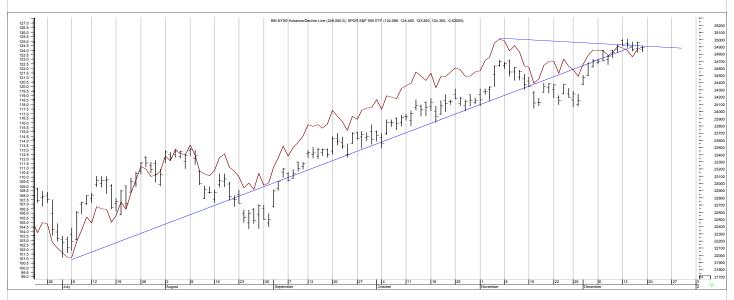

a signal, the market could have already moved by 10% or more.

Other investors try to buy and sell at turning points as a solution. They look at things like divergences and investor sentiment. That is part of what I look for.

Currently, the market is

showing signs of divergences. And even though the market has rallied further, these divergences have worsened. For example, on the chart below, you can see that the S&P 500 has made it to a recovery high, but

(Continued on bottom right on page 6 see REVIEW)

The chart shows the daily S&P 500 with red smoothed line an 80-day moving average. The black is the VIX index. The lower part shows blue volume and red spikes as possible trading signals.

### WEEKLY REVIEW

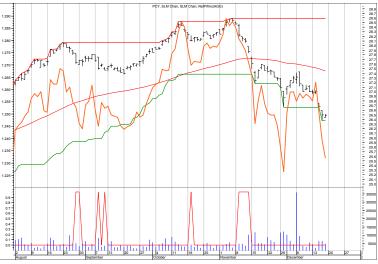

Bonds have been smacked down over the last month. Inflation fears are returning to investors.

No changes for now.

## **Income Charts**

PHB—high yield ETF.

12/20/10 No change.

12/13/10 Wait for a bounce.

12/6/10 No change.

11/29/10 No change.

11/22/10 Reduce exposure.

11/15/10 Pullback to a major uptrend line. If it declines through it, I will look to sell.

11/8/10 Still looking strong.

11/1/10 Still in an uptrend

10/25/10 Needs to hold its intermediateterm up trend line.

10/18/10 Recovery highs.

10/4/10 Take further profits on the rally.

#### TIP—Treasury inflation protection

12/20/10 Big correction. Should bounce.

12/13/10 Wait for a bounce.

12/6/10 No change.

11/29/10 No change.

11/22/10 Expect a bounce.

11/15/10 Consolidation appears to have changed to profit taking. Sit tight for now.

11/8/10 Consolidation phase.

11/1/10 Continue to hold.

10/25/10 Shot higher the past month.

10/18/10 Inflation fears pushing it up.

#### PCY—-Emerging Market Sovereign Debt

12/20/10 Trend change to down.

12/13/10 Dollar stronger oddly.

12/6/10 No change.

11/29/10 Sit tight for now.

11/22/10 Reduce exposure.

11/15/10 Dollar has rallied, which has pulled PCY lower. Will look to sell.

11/8/10 Hit the new high. See if the dollar

has an oversold rally, which would pull this index lower.

11/1/10 Expecting another new high.

10/25/10 Higher highs and higher lows is bullish.

10/18/10 Nice trade.

### **WEEKLY REVIEW**

Sell EWS as noted above. I am still expecting a correction of up to 15% for stocks.

Also tighten the stop on IWR. Sell on the day it looks like it will close below the stop.

See performance rankings of the equity oriented ETFs on page six.

The two columns to the left show the rankings of the equity oriented ETFs in our database through the previous Friday's close.

These rankings are based on momentum indicators around which we generally want to trade. Our general strategy is to invest with the stronger performing ETFs by investing with the main trend and against the minor trend down. This means that in a bear (down) market, we want to short the funds that rally against their main trend downward. In a bull market, we want to buy during selloffs with the main trend up.

(Continued from page 1) REVIEW

the advance/decline line is still diverging, it has yet to make it to a recovery high. This means the advance is narrowing and should soon falter.

As well, the VIX index (shown a few weeks ago) is trading below far below 19 (a point associated with tops) down to 17.

Investor sentiment has become more bullish. As a contrary indicator, this is bearish.

So, I still expect a correction. Perhaps it is only the end of year seasonality that holds up the market, which means January may be very chilly indeed for investors.

# **Descriptions & Disclosures**

#### **PORTFOLIO DESCRIPTIONS (pages 2 and 3)**

Our guiding goal is to provide the most return with the least risk consistently over time through bull and bear markets.

Income Portfolio, page2: Uses a proprietary selection methodology on all of the monitored bond-oriented ETFs to pick the top ETFs. I then use a proprietary timing model to decide whether to buy, sell, hold, or avoid.

Growth Portfolio, page 3: Uses the same methodologies as in the Income Portfolio, except as it is applied to stock-oriented ETFs.

All portfolios were started on 1/1/10 with \$100,000.

Portfolio changes will usually be made at the close on Monday, unless otherwise noted in any emailed hotline update. Issues are normally posted on Mondays by 1:30pm cst.

Portfolios are updated through the Friday close the week before.

Dividends are reinvested in additional shares. Commissions of \$5/trade and short-term redemption charges, if any, are applied. Interest is zero for the money market (cash) position.
